Manonmaniam Sundaranar University<br>Tirunelveli 627012, INDIA<br>Department of Mathematics

## Vision of the University

To provide quality education to reach the un-reached

## Mission of the University

* To conduct research, teaching and outreach programmes to improve conditions of human living
* To create an academic environment that honours women and men of all races, caste, creed, cultures an atmosphere that values intellectual curiosity, pursuit of knowledge, academic freedom and integrity
* To offer a wide variety of off-campus educational and training programs, including the use of information technology, to individuals and groups.
* To develop partnership with industries and government so as to improve the quality of the workplace and to serve as catalyst for economic and cultural development
* To provide quality / inclusive education, especially for the rural and un-reached segments of economically downtrodden students including women, socially oppressed and differently abled.

## Vision of the Department

To attain academic excellence at the international level at par with leading research institutions.

## Mission of the Department

To develop mathematical skills, knowledge and critical thinking in the minds of young students.

## 1. Name of the Programme : Integrated M. Sc Mathematics

2. Preamble of the Programme: Those who seek admission to Integrated M.Sc.

Mathematics Degree programme must have passed the Higher Secondary Examinations (+2) conducted by the Board of Higher Secondary Examination, Tamil Nadu with the subjects Mathematics, Physics and Chemistry or an equivalent programme of study with $60 \%$ of marks in Mathematics ( $55 \%$ for SC/ST/SCA applicants).

## 3. Programme Structures

|  | Part | Course Code | Course | Course <br> Nature | Credits | Contact <br> Hours <br> Per <br> Week | Continuous Internal Assessment (CIA) | End Semester Exam (ESE) |

| Total |  |  |  | 159 | 151 |  |  |

## List of Major Elective Papers

1. Elementary Number Theory
2. Statistics - I
3. Statistics - II
4. Numerical Methods
5. Linear Programming
6. Combinatorial Mathematics
7. Coding Theory
8. Operations Research
9. Mathematical Programming Using JAVA
10. Integral transforms and applications
11. Special Functions
12. Mathematical Logic
13. Astronomy

## 4. Scheme of Evaluation:

Each course is for 100 marks with Internal 25 marks and External 75 marks.

For Semesters I - VI, the internal assessment comprises of 2 components - 20 marks for written test (average of the best two of 3 tests) and 5 marks for Assignment.

For Semesters VII - X, the internal assessment comprises of 3 components -15 marks for written test (average of the best two of 3 tests), 5 marks for Seminar and 5 marks for Assignment.

The Question paper pattern for end semester examination is as follows:

> Section A $-10 \times 1=10$ (Objective type questions)
> Section B - $5 \times 5=25$ (Internal choice questions)
> Section C- $5 \times 8=40$ (Internal choice questions)

The duration of the examination is 3 hours. Passing minimum in the external examination is $50 \%$ (that is 38 out of 75 ). Passing minimum in the aggregate (internal and external marks put together) $50 \%$ (that is 50 out of 100 ). No passing minimum for the internal examinations.

Examination, evaluation and classification will be made as per the rules and regulations of the University in force.

## 5. Programme Outcomes*(POs):

On the successful completion of the Bachelor of Science Programme in Mathematics students will be able to

| PO 1 | develop deep interest in learning Mathematics. |
| :--- | :--- |
| PO 2 | adapt logical reasoning and critical thinking, become familiar with enough <br> number of subjects including application oriented ones to suit the present needs of <br> various allied branches in Basic Sciences, Applied Sciences and Engineering. |
| PO 3 | apply Mathematical skills in interdisciplinary areas such as Computer Science, <br> Actuarial Science, Social Sciences and other areas of inquiry so that they can <br> pursue their future career either in the core field or in the applied field. |
| PO 4 | develop analytic and problem solving skills for careers |
| PO 5 | Retell the definitions, concepts, principles and theorems by the deep knowledge <br> and understanding gained. |
| PO 6 | paraphrase various concepts of Mathematics effectively using examples and their <br> geometrical visualizations. |
| PO 7 | explain independently and perform in-depth study of various notions of <br> Mathematics. |
| PO 8 | estimate their skills and proceed to undertake further studies in Mathematics and its <br> allied areas. |

| K1- <br> Remembering | K2- <br> Understanding | K3- <br> Applying | K4- <br> Analyzing | K5- <br> Evaluating | K6- <br> Creating |
| :---: | :---: | :---: | :---: | :---: | :---: |
| PO5 | PO6 | PO3 | PO7 | PO8 | PO1, PO2, <br> PO4 |

## 6. Programme Specific Outcomes (PSOs):

On the successful completion of the Bachelor of Science Programme in Mathematics students will be able to

| PSO 1 | appreciate the emphasis given on teaching the fundamentals, the basic concepts, <br> definitions with a variety of examples. |
| :--- | :--- |
| PSO 2 | adapt the skill to facilitate with abstract reasoning and inculcate the habit of self- <br> learning. |
| PSO 3 | create a positive attitude towards Mathematics as an interesting and valuable subject <br> of study. |
| PSO 4 | define all the arithmetic, algebraic, analytic and geometric concepts. |
| PSO 5 | promote logical reasoning, critical thinking and summarize with in-depth <br> other branches of Mathematics. <br> PSO 6 |
| develop analytic and problem solving skills and getting acquainted with <br> computational Techniques. |  |
| PSO 7 | present Mathematical ideas clearly, precisely and explain fundamental concepts of <br> Mathematics to non-mathematicians |
| PSO 8 | formulate a solid foundation for higher studies in Mathematics |

## Course Description

| Semester | Course <br> Code | Title of the Course | Category | Hours/ <br> Week | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I |  | THEORY OF EQUATIONS | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. The course aims to discuss various methods in theory of equations to solve algebraic and transcendental equations.
2. To understand the relation between the roots and the coefficients of polynomial equations so as to deduce $r^{\text {th }}$ powers of roots
3. To learn different techniques and methodologies to find solution of equations.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Describe the relation between roots and coefficients <br> CO2 | K1 \& K2 |
| $\mathbf{F i n d}$ the sum of the power of the roots of an equation using | K5 |  |
| $\mathbf{C O 3}$ | Transform the equation through roots multiplied by a given <br> number, increase the roots, decrease the roots, removal of <br> terms | K6 |
| $\mathbf{C O 4}$ | Analyse the location and describe the nature of the <br> roots of an equation. | K4 |
| $\mathbf{C O 5}$ | Compute a real root of an equation by Cardan's method. | K2 \& K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Theory of equations: Remainder theorem - imaginary roots - irrational roots relations roots and coefficients.
(12 hours)
Unit II: Symmetric function of the roots - Sum of the powers of the roots - Newton's theorem.
(12 hours)
Unit III: Transformations of equations - Transformations of equations in general. (12 hours)
Unit IV: Reciprocal equations - Descarte's rule of signs -Rolle's Theorem - multiple roots. (12 hours)
Unit V: The Cubic equation - Cardan's method - The Biquadratic equation - Ferrari's method.
(12 hours)

## Text Books:

1. T. K. Manicavachagom Pillai, T. Natarajan and K. S. Ganapathy, Algebra (Volume I), S. Viswanathan Printers and Publishers Pvt. Ltd. 2008

Unit I: Chapter 6 - Sections 1 to 12,
Unit II: Chapter 6 - Sections 13 to 15
Unit III: Chapter 6 - Sections 16, 24, 25, 26
2. S. Arumugam and A. Thangapandi Isaac, Set Theory, Number System and Theory of Equations, New Gamma Publishing House, 1992

Unit IV: Chapter 5 -Sections 5.4, 5.6 and 5.7
Unit V: Chapter 5 - Sections 5.8 and 5.9

## Reference Books:

1. S. Arumugam and A. Thangapandi Isaac, Theory of Equations, Theory of Numbers and Trigonometry, New Gamma Publishing House, 2011.
2. P. R. Vittal\& V. Malini, Algebra and Trigonometry, Volume I \&II, Margham Publishers, 2013.
3. Leonard Eugene Dickson, First Course in the Theory Of Equations, Merchant Books, 2009.

| Semester | Course <br> Code | Title of the Course | Category | Hours/ <br> Week | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I |  | CALCULUS | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. To develop deep knowledge on the derivative and its geometric applications.
2. To make use of Derivative knowledge to sketch the given curves
3. To provide fair introduction to the integrability both in geometrically and analytically and some of its properties.

## Course Outcomes (COs):

On completion of this course, the Students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level Upto |  |
| :---: | :--- | :---: | :---: |
| $\mathbf{C O 1}$ | Demonstrate the notion of derivative both in geometrically and <br> analytically. Understand the properties of derivatives | K2 |  |
| $\mathbf{C O 2}$ | Compute the evolute and involute of the given curve and form <br> the pedal equation of the given curve | K3 |  |
| $\mathbf{C O 3}$ | Estimate the linear asymptotes and sketch the curves using <br> derivative technique | K5 |  |
| $\mathbf{C O 4}$ | Explain the notion of integration and its properties | K5 |  |
| $\mathbf{C O 5}$ | Develop few techniques to find the values of definite integrals | K6 |  |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |  |

## Course Outline:

Unit I: Introduction to Differentiation - Mean Value Theorem- Properties of Derivatives-
Radius of curvature in Cartesian, Parametric and Polar co-ordinates.
Unit II: Evolutes and Involutes - Pedal Equations.
Unit III: Linear Asymptotes - Curve Tracing.
Unit IV: Introduction to Integration - Methods of Integration - Integration by parts.
Unit V: Properties of Definite Integrals - Reduction formula for standard integrals.

## Course Objectives:

1. To develop the language skills of students by offering adequate practice in professional contexts.
2. To enhance the lexical, grammatical and socio-linguistic and communicative competence of first year physical sciences students
3. To focus on developing students' knowledge of domain specific registers and the required language skills.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Recognise their own ability to improve their <br> own competence in using the language | K1 |
| $\mathbf{C O 2}$ | Administer language for speaking with <br> confidence in an intelligible and acceptable <br> manner | K3 |
| $\mathbf{C O 3}$ | Express the importance of reading for life | K2 |
| $\mathbf{C O 4}$ | Read independently unfamiliar texts with <br> comprehension | K1 |
| $\mathbf{C O 5}$ | Write simple sentences without committing <br> error of spelling or grammar | K6 |
|  |  |  |

## Course Outline:

## UNIT 1: COMMUNICATION

Listening: Listening to audio text and answering questions

- Listening to Instructions

Speaking: Pair work and small group work.
Reading: Comprehension passages -Differentiate between facts and opinion
Writing: Developing a story with pictures.
Vocabulary: Register specific - Incorporated into the LSRW tasks

## UNIT 2: DESCRIPTION

Listening: Listening to process description.-Drawing a flow chart.
Speaking: Role play (formal context)
Reading: Skimming/Scanning-

Reading passages on products, equipment and gadgets.
Writing: Process Description -Compare and Contrast
Paragraph-Sentence Definition and Extended definition-
Free Writing.
Vocabulary: specific -Incorporated into the LSRW tasks.

## UNIT 3: NEGOTIATION STRATEGIES

Listening: Listening to interviews of specialists / Inventors in fields (Subject specific)
Speaking: Brainstorming.(Mind mapping).
Small group discussions (Subject- Specific)
Reading: Longer Reading text.
Writing: Essay Writing ( 250 words)
Vocabulary: Register specific - Incorporated into the LSRW tasks

## UNIT 4: PRESENTATION SKILLS

Listening: Listening to lectures.
Speaking: Short talks.
Reading: Reading Comprehension passages
Writing: Writing Recommendations
Interpreting Visuals inputs
Vocabulary: Register specific -Incorporated into the LSRW tasks

## UNIT 5: CRITICAL THINKING SKILLS

Listening: Listening comprehension- Listening for information.
Speaking: Making presentations (with PPT- practice).
Reading: Comprehension passages -Note making.
Comprehension: Motivational article on Professional Competence, Professional Ethics and Life Skills)
Writing: Problem and Solution essay- Creative writing -Summary writing Vocabulary: Register specific - Incorporated into the LSRW tasks

| Semester | Course <br> Code | Title of the Course | Category | Hours/ <br> Week | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | C |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| II |  | ANALYTICAL GEOMETRY | Core | 4 | 3 | 1 |  | 4 |

## Course Objectives:

1. This course was studied many years for its geometric nature and view.
2. It is the foundation of most modern fields of geometry, including algebraic, differential, discrete and computational geometry.
3. Unlike the others, this course simply establishes a correspondence between geometric curves and algebraic equations.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | write equations of lines and planes and identify lines and <br> planes from their equation. | K4, K5 |
| $\mathbf{C O 2}$ | measure the distances between points, lines, planes and find <br> the angle between the planes | K5 |
| $\mathbf{C O 3}$ | classify skew lines, coplanar lines and compute the <br> shortest distance between lines | K5 |
| $\mathbf{C O 4}$ | acquire and apply the knowledge of finding the equation <br> of sphere, cone and cylinder based on their properties | K2, K3 |
| $\mathbf{C O 5}$ | Construct the equation of sphere, cone and cylinder of <br> Various forms and their sections. | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Direction cosines - direction ratios - equation of planes - standard (12 hrs) form - normal form - intercept form
Unit II: Angle between two planes - Lines - symmetrical form. Angle between two planes - image of a point - image of a line
Unit III: Skew lines - shortest distance between two lines - coplanar lines
Unit IV: Sphere - plane section of a sphere - tangent plane - intersection of two spheres -intersection of a plane with sphere
Unit V: Cone and Cylinder

| II |  | VECTOR CALCULUS | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. To extend the notions of derivative and integration to vector valued functions.
2. To introduce Jacobian matrix to solve simple, double and triple integration.
3. To utilize some standard theorems to solve some special integrations called line and surface integrals

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Demonstrate the concept of vector differentiation and solve <br> simple problems | K2 |
| $\mathbf{C O 2}$ | Explain the geometric meaning of line integral, double and <br> triple integrals | K5 |
| $\mathbf{C O 3}$ | Discuss Jacobian matrix in detail to solve double and triple <br> integrals | K6 |
| $\mathbf{C O 4}$ | Explain the concept of line integrals and surface integrals <br> using double and triple integrals | K4 |
| $\mathbf{C O 5}$ | Solve double and triple integrals using the well-known <br> theorems of Green, Stokes and Gauss | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Vector differentiation - gradient - divergence - curl - solenoidal and irrotational vector -formulae involving gradient, divergence and curl.

Unit II: Vector integration - line integral - double and triple integral.
Unit III: Jacobians - change of variables.
Unit IV: Line and surface integrals
Unit V: Problems using Theorems of Green, Stokes and Gauss.

| II |  | PROFESSIONAL ENGLISH <br> II | Core | 2 | 1 | 1 | - | 2 |

[Part-III -add on Course]

## Course Objectives:

1. Develop their competence in the use of English with particular reference to the workplace situation.
2. Enhance the creativity of the students, which will enable them to think of innovative ways to solve issues in the workplace.
3. Develop their competence and competitiveness and thereby improve their employability skills.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :---: | :---: |
| $\mathbf{C O 1}$ | Take part in interviews with boldness and confidence. | K4 |
| $\mathbf{C O 2}$ | Administer language for speaking with confidence in an <br> intelligible and acceptable manner | K3 |
| $\mathbf{C O 3}$ | Adapt easily into the workplace context, having become <br> communicatively competent. | K6 |
| $\mathbf{C O 4}$ | Read independently unfamiliar texts with comprehension | K1 |
| $\mathbf{C O 5}$ | Apply to the Research \&Development organisations/ sections <br> in companies and offices with winning proposals. | $\mathbf{K 3}$ |

## Course Outline:

## Unit 1- Communicative Competence

Listening - Listening to two talks/lectures by specialists on selected subject specific topics (TED Talks) and answering comprehension exercises (inferential questions)

Speaking: Small group discussions (the discussions could be based on the listening and reading passages- open ended questions

Reading: Two subject-based reading texts followed by comprehension activities/exercises
Writing: Summary writing based on the reading passages.

Grammar and vocabulary exercises/tasks to be designed based on the discourse patterns of the listening and reading texts in the book. This is applicable for all the units.

Unit 2 - Persuasive Communication
(18 hrs)
Listening: listening to a product launch- sensitizing learners to the nuances of persuasive communication

Speaking: debates - Just-A Minute Activities
Reading: reading texts on advertisements (on products relevant to the subject areas) and answering inferential questions

Writing: dialogue writing- writing an argumentative/persuasive essay.

## Unit 3- Digital Competence

(18 hrs)
Listening to interviews (subject related)
Speaking: Interviews with subject specialists (usingvideo conferencing skills)
Creating Vlogs (How to become a vlogger and use vlogging tonurture interests - subject related)

Reading: Selected sample of Web Page (subject area)
Writing: Creating Web Pages
Reading Comprehension: Essay on Digital Competence for Academic and Professional Life.
The essay will address all aspects of digital competence in relation to MS Office and how they can be utilized in relation to work in the subject area

## Unit 4-Creativity and Imagination

( 18 hrs )
Listening to short ( 2 to 5 minutes) academic videos (prepared by EMRC/ other MOOC videos on Indian academic sites - E.g. https://www.youtube.com/watch?v=tpvicScuDy0)

Speaking: Making oral presentations through short films - subject based
Reading: Essay on Creativity and Imagination (subject based)
Writing - Basic Script Writing for short films (subject based)

- Creating blogs, flyers and brochures (subject based)
- Poster making - writing slogans/captions(subject based)

## Unit 5- Workplace Communication\& Basics of Academic Writing

Speaking: Short academic presentation using PowerPoint
Reading \& Writing: Product Profiles, Circulars, Minutes of Meeting.
Writing an introduction, paraphrasing
Punctuation(period, question mark, exclamation point, comma, semicolon, colon, dash, hyphen, parentheses, brackets, braces, apostrophe, quotation marks, and ellipsis)

Capitalization (use of upper case)

| III |  | REAL ANALYSIS | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. To introduce one of the most important axioms in Analysis, called LUB axiom, to solve some simple problems.
2. To provide fundamental theorems and results which help to identify the convergence of the given sequence.
3. To develop fair idea on the convergence of series and to establish standard tests to check the convergence of the given series.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :--- | :--- | :---: |
| CO1 | Explain the usage of LUB axiom in Analysis with suitable <br> examples | K5 |
| CO2 | Elaborate various types of sequences with counter examples | K6 |
| $\mathbf{C O 3}$ | Construct new convergent sequences with the gained <br> knowledge | K6 |
| CO4 | Explain and Apply standard theorems on limits to find the <br> limits of given sequences | K5 |
| CO5 | Extend the convergence concept to series | K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Bounded sets - upper and lower bounds - LUB axiom - Archimedean property Density of rational and irrationals - Positive $\mathrm{n}^{\text {th }}$ root of a positive real number.

Unit II: Sequences - Bounded sequences - monotonic sequences - convergent sequences divergent and oscillating sequences

Unit III: The algebra of limits. Behaviour of monotonic sequences.
Unit IV: Some theorems on limit - sub sequences - limit points - Cauchy sequences - Cauchy general principle of convergence of sequence

Unit V: Series - infinite series - comparison test - D'Alembert's ratio test - Root test Cauchy's condensation test.

| III |  | PROGRAMMING IN C | Core | 4 | 3 | - | $\mathbf{1}$ | 4 |

## Course Objectives:

1. The course is designed to provide complete knowledge of C language with practicals in the computer Lab.
2. It imparts adequate knowledge on the need of programming languages and problem solving techniques
3. It makes the students get acquainted with the concept of structures and pointers in C.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | remember the importance and functioning of C programming | K1 |
| $\mathbf{C O 2}$ | classify decision making and looping classes and apply <br> them in programming | K2, K3 |
| $\mathbf{C O 3}$ | Implement the concept of arrays, pointers and structures <br> with ethical coding standards | K3 |
| $\mathbf{C O 4}$ | develop an in-depth understanding of functional and logical <br> concepts of C Programming | K2 |
| $\mathbf{C O 5}$ | choose the right data representation formats based on the <br> requirements of the problem | K4, K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : Constants - variables - Data types - operations and Expressions - ( $\mathbf{1 5} \mathbf{h r s}$ ) managing input and output operations

Unit II : Decision making and branching - Decision making and looping
Unit III : Arrays - Handling of character strings
Unit IV: Structures and unions
Unit V : Pointers

| III |  | BASIC MATHEMATICS | Core | 4 | 3 | 1 | - | 4 |

## Course Objectives:

1. The main aim of introducing "Quantitative Aptitude" for mathematics students is to develop skill to meet the competitive examinations for better job opportunity.
2. Effort has been made to accommodate fundamental, mathematical aspects to instill confidence among students.
3. Enrich their knowledge and to develop their logical reasoning thinking ability.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Analyze the problems logically and approach the problems in <br> a different manner. | K4 |
| $\mathbf{C O 2}$ | Define HCF and LCM. | K1 |
| $\mathbf{C O 3}$ | Explain the significance of the notions of conversion of <br> decimal to vulgar function |  <br> K4 |
| $\mathbf{C O 4}$ | Solve the problems easily by using short-cut method with time <br> management which will be helpful to them to clear the <br> competitive exams for better job opportunity | K3 |
| $\mathbf{C O 5}$ | Evaluate the cube root of positive integer using factorization <br> method. | K5 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

UNIT I: Numbers - Face value and place value of a digit in a number - test of divisibility, Applications of algebraic formulae, unit digit - series.

UNIT II: H.C.F. and L.C.M. of numbers - factorization method - common division method, H.C.F. and L.C.M. of decimal fraction - comparison of fractions.

UNIT III: Decimal fraction - conversion of decimal into vulgar fraction-operation son decimal fractions- comparison of fractions-recurring decimal-mixed recurring decimal.
(9 hours)
Unit IV: Simplification - BODMAS Rule - modulus of a real number - vinculum - Some real life problems - missing numbers in the expression.

Unit V: Square root and cube root - finding square root by factorization method- perfect square and perfect cube.

| IV |  | DIFFERENTIAL |  |  |  |  |  |  |
| EQUATIONS | Core | 4 | 3 | 1 | - | 4 |  |  |

## Course Objectives:

1. To provide systematic development to solve first order differential equations.
2. To extend the gained knowledge to solve higher order differential equations with constant or variable co-efficient.
3. To establish the concept of Partial differential equations and to find solutions of some standard type partial differential equations.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Develop various techniques to solve first order first degree <br> differential equations | K6 |
| $\mathbf{C O 2}$ | Solve Linear Differential Equations with higher order | K6 |
| $\mathbf{C O 3}$ | Formulate various methods to solve Linear Differential <br> Equations with variable co-efficient. | K5 |
| $\mathbf{C O 4}$ | Figure out the formulation of Partial Differential Equations <br> and some standard first order PDE | K4 |
| $\mathbf{C O 5}$ | Solving First Order PDE | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Equation of First Order and First Degree - Variable separable method - Homogeneous equations - non-homogeneous equations - Exact differential equations - Linear equations

Unit II: Linear Equations of Higher Order with Constant Co-efficient - Method of finding Complementary Functions - Particular Integrals

Unit III: Linear Equations with variable co-efficient - The general solution in terms of known integrals of C.F. - Removal of first derivative - The method of variation of parameter Simultaneous linear differential equations

Unit IV: Formation of PDE - Some standard forms of first order PDE

Unit V: Solving first order PDE - Lagrange's method - Charpit's method

| IV |  | LATEX AND PYTHON | Core | 4 | 3 | - | $\mathbf{1}$ | $\mathbf{4}$ |

## Course Objectives:

1. This course introduces the LaTeX typesetting language to all prospective interested students.
2. It is used for writing all scientific papers and presentations in Mathematics, this knowledge how to use it is essential for all to be professionals.
3. Understand the basic components of computer programming using the Python language. Demonstrate significant experience with the Python program development environment.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Remember to download and install open source software <br> Latex | K1 |
| CO2 | Understanding and formatting Latex | K2 |
| CO3 | Illustrate to learn to create Latex file | K3 |
| CO4 | Apply and Analyze the PYTHON commands to large <br> PYTHON programme | K3 \& K4 |
| CO5 | Able to learn mathematics derivations and structures using <br> PYTHON | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Document Layout and organization - Document class, Page style, Parts of the document, Text formatting, TeX and its offspring, what's different in latex 2 - Distinguishing LaTeX 2 and basics of LaTeX file.
(12 hours)
Unit II: Commands and environments-command names and arguments, Environments, Declarations, Lengths, Special characters, Fragile Commands, Exercise. Table of contents, Fine - Tuning text, Word division, Labelling, Referencing, Displayed text - Changing font, Centering and identifying, Lists, Generalized Lists, Theorem like declarations, Tabular stops, Boxes.
( 12 hours)
Unit III: Tables, Printing literal text, Footnotes and marginal notes. Drawing pictures using LaTeX, Mathematical formulas - mathematical environments, Main elements of math mode, Mathematical symbols, Addition elements, Fine - tuning Mathematics.
( 12 hours)
Unit IV: Introduction to Python - Why Python - Installing in various Operating Systems Executing Python Programs - Basic Programming concepts - Variables, expressions and statements - Input/ Output -Operators.
( 12 hours)

Unit V: Conditions - Functions - Arguments - Return values - Iteration - Loops - Strings Data Structures - Lists - Dictionaries - Tuples - Sequences - Exception Handling.
(12 hours)

| IV |  | DISCRETE <br> MATHEMATICS | Core | 3 | 2 | 1 | - | 3 |

## Course Objectives:

1. This course makes the learners acquire intense knowledge of mathematical logic, set theory, relations and functions.
2. It applys rules of inference, tests for validity, and methods of proof including direct and indirect proof forms, proof by contradiction, proof by cases, and mathematical induction and write proofs using symbolic logic.
3. It simplifies and evaluates basic logic statements including compound statements, implications, inverses, converses, and contra positives using truth tables and the properties of logic.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |  |
| :---: | :--- | :---: | :---: |
| $\mathbf{C O 1}$ | remember the fundamental ideas and notation of discrete <br> mathematics with examples. | K1 |  |
| $\mathbf{C O 2}$ | understand and apply knowledge to analyze and solve <br> problems using models of Discrete Mathematics | K2 |  |
| $\mathbf{C O 3}$ | show a binary relation on a set is an equivalence relation, or <br> give a counterexample to show that it is not. | K5 |  |
| $\mathbf{C O 4}$ | understand and use the terms cardinality, finite, countably <br> infinite, and uncountably infinite, and determine which of <br> these characteristics is associated with a given set. | K2, K5 |  |
| $\mathbf{C O 5}$ | describe the connection between bijective functions, <br> inverses and find the inverse of an invertible function. | K1, K5 |  |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |  |

## Course Outline:

Unit I : Mathematical logic: Logical statement or proposition- type of (10 hrs) propositions- the propositional calculus - the negation of a proposition- disjunction- conjunction- tautologies and contradictions- logical equivalence - the algebra of propositionsconditional propositions - converse inverse and contrapositive propositions - the negation of a conditional proposition biconditional propositions - arguments.
Unit II : Set theory: Set- set designation- null sets and unit sets- special sets of numbers- universal set- subsets, proper subsets and equal sets- set operations- union operations- properties of union operation-intersection- properties of intersection operation.

Unit III : Distributive properties - complementation- relative complement - (9 hrs) properties of complement - properties of difference - symmetric difference- power set- Cartesian products.
Unit IV: Relation and functions: Relation- equivalence relation- partitionpartial order relation.
Unit V : Function - inverse mapping- composition mappings - binary (8 hrs) operations- countable and uncountable sets.

| $\mathbf{V}$ |  | ABSTRACT ALGEBRA | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. This course deals basic concepts of groups starting from the special group's viz., Dihedral groups, General linear group, Quaternion group, and Symmetric groups.
2. It mainly deals the fundamental concepts of groups through the generalized tool of group actions.
3. This course starts with basic concepts of rings and discuss about special rings viz., matrix rings, ring of Quaternion's, group ring etc. It shall discuss and analyze the properties and interlinks between the concepts of Euclidean ring, Principal Ideal Domain, Unique Factorization Domain and Integral Domain.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Explain the significance of the notions of cosets, normal <br> subgroups, and factor groups. |  <br> K4 |
| $\mathbf{C O 2}$ | Demonstrate ability to think group actions <br> critically by Cayley's theorem. | K2 |
| $\mathbf{C O 3}$ | Find all conjugates of k-cycle in $\mathrm{S}_{\mathrm{n}}$ | K3 |
| $\mathbf{C O 4}$ | Determine the number of zero-divisor of a finite ring | K3 |
| $\mathbf{C O 5}$ | Infer the irreducible element and prime element. | K4 \& K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Semigroups and groups - homomorphisms - subgroups and cosets.
Unit II: Cyclic groups - Normal subgroups - quotient groups - isomorphism theorems automorphisms.
(12 hours)
Unit III: Permutation groups: Cyclic decomposition - alternating group $\mathrm{A}_{\mathrm{n}}$.
(12 hours)
Unit IV: Rings: Types of rings - Subrings and characteristic of a ring - additional examples of rings.
(12 hours)
Unit V: Ideals - homomorphisms - sum and direct sum of ideals - maximal and prime ideals.

| $\mathbf{V}$ |  | METRIC SPACES | Core | 4 | 3 | 1 | - | 4 |

## Course Objectives:

1. This course was studied long time for its essential for all advanced course in mathematics.
2. This course facilitates the student an entry into the portals of higher learning in mathematics.
3. It covers all the fundamentals of metric topology.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | quote and understand the definition of a limit of a sequence <br> or a function in its various forms | K1, K6 |
| $\mathbf{C O 2}$ | Illustrate the concept of complete metric spaces and deduce <br> results | K2, K5 |
| $\mathbf{C O 3}$ | demonstrate the equivalent characterizations of continuity <br> and homeomorphism | K1 |
| $\mathbf{C O 4}$ | interpret on the properties of continuity and connectedness | K2, K4 |
| $\mathbf{C O 5}$ | relate the concept of compact spaces and <br> equivalent characterizations | develop the |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : Metric spaces: Definitions and examples- Bounded sets in a metric (12 hrs) space- open ball in a metric space- open sets- subspaces.
Unit II Interior of a set - Closed sets - closure, limit point, dense sets complete metric space: Introduction - Completeness - Baire's category theorem.
Unit III : Continuity: Introduction - Continuity - homeomorphism.
Unit IV: Connectedness: Introduction- definition and examples - connected subsets of R- connectedness and continuity.
Unit V : Compactness: Introduction - compact space- compact subsets of R - (12 hrs) continuity and compactness - equivalent characterization for compactness.

| Semester | Course <br> Code | Title of the Course | Category | Hours/ <br> Week | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{V}$ |  | COMPLEX ANALYSIS | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. To provide fair foundation on the geometry of complex numbers and Analytic functions.
2. To introduce the concept of Contour integrals of complex functions with its properties.
3. To solve some Contour integrations using standard theorems on complex function theory.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Determine the geometry of complex numbers in systematic <br> approach | K4 |
| $\mathbf{C O 2}$ | Develop Cauchy- Riemann equation to check the analyticity <br> of complex functions | K6 |
| $\mathbf{C O 3}$ | Understand the geometry of cross ratio to construct bilinear <br> transformations | K2 |
| $\mathbf{C O 4}$ | Explain standard theorems on Contour integration | K5 |
| $\mathbf{C O 5}$ | Apply residues theorem to compute real definite integrals | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: $\mathrm{n}^{\text {th }}$ roots of a complex number - circles and straight lines - regions in the complex plane - Riemann's stereographic projection.

Unit II: Differentiability - Cauchy Riemann equations - Analytic functions - Harmonic functions - Power series.

Unit III: Bilinear transformations - cross ratio - fixed points of Bilinear transformations Mapping properties.

Unit IV: Complex Integration - Definite integral - Cauchy's theorem - Cauchy's integral formula - higher derivative

Unit V: Residues, Cauchy's residue theorem - evaluation of definite integrals - Type I and Type II integrals.

| VI |  | LINEAR ALGEBRA | Core | 4 | 3 | $\mathbf{1}$ | - | 4 |

## Course Objectives:

1. Problems in linear algebra arise in a wide variety of scientific and engineering applications including the design of structures, the analysis of electrical networks, and the modelling of chemical processes.
2. This course will cover the analysis and implementation of algorithms used to solve linear algebra problems in practice.
3. This course will enable students to acquire further skills in the techniques of linear algebra, as well as understanding of the principles underlying the subject.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | To determine solutions to problems and <br> investigate the theoretical aspects of subspace <br> and various types of linear transformations. | K3 \& K4 |
| $\mathbf{C O 2}$ | Recognize the concepts of the terms span, linear <br> independence, basis, and dimension, and apply these <br> concepts to various vector spaces and subspaces | K1 |
| $\mathbf{C O 3}$ | Compute linear transformations, kernel and range, <br> and inverse linear transformations, and find <br> matrices of general linear transformations. | K3 \& K5 |
| $\mathbf{C O 4}$ | Construct orthogonal and orthonormal bases: Gram-Schmidt <br> process and use bases and orthonormal bases to solve <br> application problems | K3 |
| $\mathbf{C O 5}$ | Relate matrices and linear transformations, <br> compute Eigen values and Eigen vectors of linear <br> transformations | K4 \& K5 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit 1: Vector Spaces: Definitions and Examples - Subspaces - Linear Transformation ( 12 hours)
Unit 2: Span of a set-Linear Independence-Basis and dimension
(12 hours)
Unit 3: Rank and Nullity - Matrix of a Linear transformation-Inner product spaces: Introduction - Definition and Examples.
(12 hours)

Unit 4: Orthogonality- Orthogonal Complement-Theory of Matrices: Simultaneous linear Equations.
(12 hours)
Unit 5: Characteristic equation and Cayley Hamilton Theorem

| VI |  | GRAPH THEORY | Core | 4 | 3 | 1 | - | 4 |

## Course Objectives:

1. This course is a new branch of Mathematics which got its due recognition because of its diverse applications in computer science, chemistry, sociology.
2. It is a part of Discrete Mathematics which deals with a finite set of objects.
3. Upon successful completion of this course, the students will able to use graph theory as a modelling to solve real life problems.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | understand fundamental concepts of graphs, graph operations <br> and related results | K2 |
| $\mathbf{C O 2}$ | familiarized with the concepts and results on Eulerian graphs <br> and Hamiltonian graphs | K1 |
| $\mathbf{C O 3}$ | Write precise and accurate mathematical definitions of basic <br> concepts in graph theory | K3 |
| $\mathbf{C O 4}$ | gain knowledge in the concepts of trees and spanning trees | K1, K2 |
| $\mathbf{C O 5}$ | Infer the results on planar graphs and their properties | K1, K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : Definition and Examples of Graphs - Degrees - subgraphs - (12 hrs) isomorphism - independent sets and coverings - intersection graphs and line graphs - matrices - operation on graphs

Unit II Degree sequences - Graphic sequences - Walks - Trials and Paths - (12 hrs)
: connectedness and components - connectivity.
Unit III : Eulerian graphs - Hamiltonian graphs - characterization of trees - (12 hrs) centre of a tree - Matchings

Unit IV: Definition and Properties of planar graphs - characterization of planar graphs - chromatic number and chromatic index.

Unit V : Chromatic polynomials - definition and basic properties of digraphs - (12 hrs) paths and connectedness in digraphs - digraphs and matrices

| VI |  | DYNAMICS | Core | 4 | 3 | 1 | - | 4 |

## Course Objectives:

1. To introduce the basic laws, principles and postulates governing dynamic system.
2. To cover topics like projectiles, collision of elastic bodies oblique impact of two smooth spheres, simple harmonic motion.
3. To teach the basic concepts and principles of dynamics, analyze the mechanism of physical problems, and introduce the postulates governing dynamic system.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Retell about projectiles | K1 |
| CO2 | Compute velocity of a particle | K3 |
| CO3 | Analyze resultant of collision of elastic bodies | K4 |
| CO4 | Describe about oblique impact of two smooth spheres | K2 |
| $\mathbf{C O 5}$ | Elucidate properties of simple harmonic motion | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Projectiles
Unit II: Velocity of the projectile
Unit III: Collision of elastic bodies
Unit IV: Oblique impact of two smooth spheres
Unit V: Simple Harmonic motion
(12 hours)
(12 hours)
(12 hours)

|  |  | ELEMENTARY <br> NUMBER THEORY | Elective | 3 | 2 | 1 | - | 3 |

## Course Objectives:

1. This course was studied for its long and rich history.
2. It is well known for its wealth of easily accessible and fascinating questions, and its intellectual appeal.
3. In recent years it has been studied for the reason that it has become essential for Cryptology.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | define, interpret and apply the concepts and principles of <br> number theory to perform numerical and symbolic <br> computations | K1, K6 |
| $\mathbf{C O 2}$ | apply different types of proof writing techniques in number <br> theory to related situations | K2, K5 |
| $\mathbf{C O 3}$ | develop an in-depth understanding of number theoretic <br> functions | K1 |
| $\mathbf{C O 4}$ | communicate the number theory concepts, techniques and <br> principles effectively in both written and oral form | K2, K4 |
| $\mathbf{C O 5}$ | understand the concept of congruence and apply it to various <br> results | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : Divisibility Theory in the Integers: Early number theory-the division (9 hrs) algorithm-the greatest common divisor-the Euclidean algorithm
Unit II : The Diophantine equation - Primes and their distribution: The fundamental theorem of Arithematics-the Sieve of Eraosthenes - the Goldbach conjecture.
Unit III : The theory of congruences: basis properties of congruences - binary ( $\mathbf{9} \mathbf{~ h r s}$ ) and decimal representations of integers - linear congruences and the Chinese remainder theorem.
Unit IV: Fermat's theorem: Fermat's Little theorem and Pesudoprimes Wilson theorem - The Fermat-Kraitchik factorization method.

Unit V: Number theoretic functions: the sum and number of divisors - the ( $\mathbf{9} \mathbf{~ h r s )}$ Mobius inversion function - the greatest integer function.

|  |  | STATISTICS - I | Elective | 3 | 3 | - | - | $\mathbf{3}$ |

## Course Objectives:

1. To enable the student to understand the basic concepts and terminology in statistics.
2. To administer the students the knowledge of frequency distributions and how they are used in statistical analysis.
3. To help them identify the proper measure of central tendency to use for each level of measurement.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | memorize formulas for central tendencies and measures of <br> dispersion | K1 |
| $\mathbf{C O 2}$ | Estimate moments, skewness and kurtosis and able to fit any <br> given curve | K2 |
| $\mathbf{C O 3}$ | Administer knowledge of correlation and regression and their <br> properties | K3 |
| $\mathbf{C O 4}$ | Appraise knowledge of discrete probability distributions | K5 |
| $\mathbf{C O 5}$ | Appraise knowledge of continuous probability distributions | K5 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Central tendencies - arithmetic mean - partition values - mode - geometric mean and harmonic mean - measures of dispersion
Unit II: Moments, Skewness and Kurtosis - Curve fitting - Method of least squares -Fitting lines - Parabolic, Exponential and logarithmic curves.
Unit III: Correlation and regression - Scatter diagram - Karl Pearson's coefficient of correlation - Properties - Lines of regression, Regression coefficient and properties - Rank correlation.

Unit IV: Discrete Probability Distributions: Geometric, Binomial and Poisson distributions Their moment generating function, Characteristic function, Properties and simple application.
(9 hours)
Unit V: Continuous Probability Distributions: Beta and Gamma Distributions, Normal distribution - Standard normal distribution - Their properties - Simple Problems - Importance of normal distribution.
(9 hours)

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | STATISTICS - II | Elective | 3 | 3 | - | - | 3 |

## Course Objectives:

1. To familiarize students to design and analyse survey samples for finite populations.
2. To train the students to test or analyze their sample data with the help of several tests
3. To develop the skill to administer ANOVA tables.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Explain tests of significance and errors in testing of hypothesis | K2 |
| $\mathbf{C O 2}$ | Explain tests of significance and errors in testing of hypothesis <br> using t-test | K2 |
| $\mathbf{C O 3}$ | Elucidate test based on chi square distribution | K3 |
| $\mathbf{C O 4}$ | Analyze time series and its components | K4 |
| $\mathbf{C O 5}$ | Formulate analysis of variance | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Tests of Significance ( Large samples ): Sampling distribution - Testing of Hypothesis - Type I and Type II errors - Critical region, level of significance - Test of significance for large samples - Testing a single proportion - Difference of proportions testing a single mean - Difference of means.
(9 hours)
Unit II: Tests of Significance (Large samples): Tests based on $t$ - distribution - Single mean - Difference of means - Tests based on F - distribution.
Unit III: Test based on chi square distribution - Goodness of fit - Independence of attributes.
Unit IV: Analysis of time series: Time series - Components of a time series - measurement of trends.
Unit V: Analysis of Variance - One criterion of classification - Two criteria of classification Three criteria of classification.

|  |  | NUMERICAL METHODS | Elective | 3 | 3 | - | - | $\mathbf{3}$ |

## Course Objectives:

1. The aim of this course is to develop the skills in solving algebraic, transcendental, differential and integral equations numerically prerequisite.
2. To perform an error analysis for various numerical methods and derive appropriate numerical methods to solve definite integrals.
3. The outcome of the course is enabling the students to get numerical (approximate) solutions wherever analytic (exact) solutions are not possible.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Solve algebraic and transcendental equations using <br> appropriate numerical methods and approximate a function <br> using appropriate numerical methods. | K2 |
| $\mathbf{C O 2}$ | Derive numerical methods for various mathematical <br> operations and tasks such as interpolation, differentiation, <br> integration and the solution of linear and nonlinear equations | K3 |
| $\mathbf{C O 3}$ | Analyze and evaluate the accuracy of common numerical <br> methods. | K4 |
| $\mathbf{C O 4}$ | Evaluate and interpret results on real life problems using <br> appropriate numerical techniques. | K5 |
| $\mathbf{C O 5}$ | Solve algebraic and transcendental equations using <br> appropriate numerical methods and approximate a function <br> using appropriate numerical methods. | K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Errors in Numerical Calculations: Errors and their computations - A general error formula - Error in a series. Approximation Solution of Algebraic and Transcendental equations: The Bisection method - The Method of False position - Iteration method - Newton - Raphson method.
(9 hours)
Unit II: Interpolation: Finite differences - Forward Differences - Backward Differences Central Differences - Symbolic Relations and Separation of Symbols. Newton's Formulae for Interpolation - Gauss's central difference formulae - Stirling's formula - Interpolation with unevenly spaced points: Lagrange's interpolation formula - Inverse Interpolation. (9 hours) Unit III: Numerical Differentiation: Derivatives using Newton's Forward Difference Formula -Derivatives using Newton's Backward Difference Formula - Derivatives using Stirling‘s Formula - Maxima and Minima of Tabulated Function.
(9 hours)

Unit IV: Numerical Integration: General Quadrature Formula - Trapezoidal Rule - Simpson's 1/3 Rule - Simpson‘s 3/8 Rule.
(9 hours)
Unit V: Numerical Solutions of System of Linear Equations: Gauss elimination method Gauss - Jordan method - Jacobi‘s method - Gauss - Seidel method.
(9 hours)

|  |  | LINEAR PROGRAMMING | Elective | 3 | 3 | - | - | 3 |

## Course Objectives:

1. The aim of this course is to introduce students to linear optimization theory and its applications. The field of linear programming provides the appropriate methods for the efficient computation of optimal solutions of a problem which is modelled by a linear objective function and a set of linear constraints.
2. To appropriately formulate Linear Programming models for service and manufacturing systems, and apply operations research techniques and algorithms to solve these LP problems.
3. To appropriately formulate Integer Programming models for service and manufacturing systems, and apply operations research techniques and algorithms to solve these IP problems

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Formulate a given simplified description of a suitable real- <br> world problem as a linear programming model in general, <br> standard and canonical forms | K6 |
| $\mathbf{C O 2}$ | Use the simplex method to solve small linear programming <br> models by hand, given a basic feasible point. | K3 |
| $\mathbf{C O 3}$ | Distinguish simple method and dual simplex method. | K4 |
| $\mathbf{C O 4}$ | Formulate and solve the transportation problems <br> using both manual methods and the Excel Solver, <br> and interpret the solutions. | K6 |
| $\mathbf{C O 5}$ | Understand the theory of valid inequalities and how it applies <br> to the solution of integer programs. | K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Definition - examples - Mathematical formulation - Standard form - Theorems (statements only) - Graphical solution - simplex method.
Unit II: The Big-M method - Two phase simplex method
Unit III: Duality - The dual of the dual is the primal - Duality theorems (Statements only) Dual simplex method.

Unit IV: Transportation problem - Mathematical formulation - North west corner rule method of matrix minima - Vogel's Approximation method - MODI optimality test Assignment problem.
(9 hours)
Unit V: Integer Programming: Gomory's cutting plane method - Branch and bound method.
(9 hours)

|  |  | COMBINATORIAL <br> MATHEMATICS | Elective | 3 | 3 | - | - | 3 |

## Course Objectives:

1. For many years, this course has been studied for its essential in solving many enumeration problems.
2. It makes the students familiar with fundamental combinatorial structures that naturally appear in various other fields of Mathematics and Computer Science.
3. It develops skills to apply the techniques of combinations and permutations for counting the number of certain configurations.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | remember formulas for counting basic combinatorial <br> outcomes to construct solutions to complete combinatorial <br> enumeration problems | K1, K6 |
| $\mathbf{C O 2}$ | apply counting strategies to solve an optional <br> assignment problem. | K2, K5 |
| $\mathbf{C O 3}$ | use specialized techniques to solve combinatorial <br> enumeration problems: generating functions; recurrence <br> relations. | K1 |
| $\mathbf{C O 4}$ | understand the concepts of permutations with <br> restrictions on relative positions and the rook <br> polynomials | K2, K4 |
| $\mathbf{C O 5}$ | enumerate configuration using the Inclusion - Exclusion <br> principle | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : Selections and binomial coefficients - permutations - ordered (9 hrs) selections - unordered selections.
Unit II : Pairing problems - pairings within a set - pairing between sets - an (9 hrs) optional assignment problem.
Unit III : Recurrence - Fibonacci type relations - using generating functions. (9 hrs)
Unit IV: The Inclusion - Exclusion principle - the principle - Rook (9 hrs) polynomials.
Unit V: Block designs - square block designs (9 hrs)

|  |  | CODING THEORY | Elective | 3 | 2 | $\mathbf{1}$ | - | $\mathbf{3}$ |

## Course Objectives:

1. This course is the study of methods for efficient and accurate transfer of information from one place to another.
2. To introduce the basic concepts of Coding Theory such as, Double ErrorCorrecting B.C.H. code, Cyclic codes, The Group of a code, Quadratic residue codes and Bose-Chaudhuri- Hocquenghem codes.
3. To familiarize with the developments of Cryptography.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Tabulate the basics of error correction and error detection | K1 |
| $\mathbf{C O 2}$ | Analyze and reproduce concepts of linear codes | K4 |
| $\mathbf{C O 3}$ | Administer properties of linear codes | K3 |
| $\mathbf{C O 4}$ | Explain perfect codes, hamming codes and Golay codes | K2 |
| $\mathbf{C O 5}$ | Assemble all the properties of Cyclic Codes | K6 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Error detection, correction and decoding: Communication channels- Maximum likelihood decoding- Hamming distance- Nearest neighbor /minimum distance decodingDistance of a code
Unit II: Linear codes: Vector spaces over finite fields- Linear codes- Hamming weight Bases for linear codes - Generator matrix and parity-check matrix

Unit III: Linear codes: Equivalence of linear codes - Encoding with a linear code - Decoding of linear codes - Cosets - Nearest neighbour decoding for linear codes - Syndrome decoding
(9 hours)
Unit IV: Bounds in coding theory: The main coding theory problem- Lower bounds-Sphere-covering bound- Hamming bound and perfect codes- Binary Hamming codes- Golay Code.
(9 hours)
Unit V: Cyclic codes: Definitions- Generator Polynomials - Generator and parity-check matrices - Decoding of cyclic codes- Burst-error-correcting
(9 hours)

|  |  | OPERATIONS RESEARCH | Elective | 3 | 3 | - | - | $\mathbf{3}$ |

## Course Objectives:

1. To develop fair knowledge on the basics of Inventory control and Queuing theory.
2. To setup foundation on Network Analysis.
3. To give systematic approach to handle non-linear Problems analytically.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Explain the fundamental concepts of Inventory Theory | K5 |
| $\mathbf{C O 2}$ | Classify various models involving Queuing Theory | K4 |
| $\mathbf{C O 3}$ | Analyze Network problems both in geometrically and <br> analytically | K4 |
| $\mathbf{C O 4}$ | Explain the Mathematical foundation to encounter the <br> Nonlinear problems | K5 |
| $\mathbf{C O 5}$ | Apply standard theorems to handle Nonlinear problems | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I Inventory - deterministic models - uniform rate of demand, infinite state of production and no shortage - Uniform rate of demand, finite rate of replenishment and no shortage - Uniform rate of demand, instantaneous production with shortages.

Unit II Queuing Theory - General concepts and definitions - classification of Queues Poisson process - properties of Poisson process models:
i. $\quad(\mathrm{M} / \mathrm{M} / 1):(\infty /$ FCFS $)$
ii. (M/M/1):(N/FCFS)
iii. $\quad(\mathrm{M} / \mathrm{M} / \mathrm{S}):(\infty / \mathrm{FCFS})$

Unit III Network Analysis - Drawing Network diagram - critical path method - labelling method -concept of slack and floats on network - PERT - Difference in PERT and CPM.
Unit IV Non-linear Programming: General Non-linear Programming Problem - Problem of constrained maxima and minima - graphical solution - saddle point problems saddle points and N. L.P.P.

Unit V Non - linear Programming Techniques: Kuhn - Tucker conditions - Non-negative constraints - Quadratic Programming - Wolfe's modified simplex method - Beale's method - Separable convex programming.

|  |  | JRA |  |  |  |  |  |  |

## Course Objectives:

1. To understand the basic concepts and fundamentals of platform independent object oriented language.
2. To demonstrate skills in writing programs using exception handling techniques and multithreading.
3. To understand streams and efficient user interface design techniques.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Write Java application programs using OOP principles and <br> proper program structuring. | K1 |
| $\mathbf{C O 2}$ | Develop reusable programs using the concepts of inheritance, <br> polymorphism, interfaces and packages. | K6 |
| $\mathbf{C O 3}$ | Apply the concepts of Multithreading and Exception <br> handling to develop efficient and error free codes | K3 |
| $\mathbf{C O 4}$ | Design event driven GUI and web related applications <br> which mimic the real word scenarios. | K6 |
| $\mathbf{C O 5}$ | Understand the basics of java console and GUI based <br> programming. | K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Introduction to JAVA - History - Overview - JAVA application programs - JAVA Applets - commands line arguments - Data types - variables - comments.
Unit II: Objects and Classes - Defining a class - constructors - multiple constructors wrapper classes - conversion of data types - command live and keyboard input - Attributes and methods - Attributes - overriding - object composition with a simple example. (9 hours) Unit III: If structure - nested if structure - break and labelled break - switch structures while loop - do loop - for loop - natural sum and partial sum of series using loops - Divergent series verification using loops - nested loop.

Unit IV: HTML entity encoding in JAVA - JAVA string encoding- attributes - encoding schemes that are supported by the JAVA platform - character encoding - objects, Images and applets in HTML documents.
Unit V: JAVA script - Grammar - objects - functions - inheritance - Arrays.

|  |  | INTEGRAL TRANSFORMS <br> \& APPLICATIONS | Elective | 3 | 3 | - | - | 3 |

## Course Objectives:

1. This course introduces the basic concepts of Integral transforms and Fourier series.
2. For many years, it has been studied for its essential in applied mathematics, and especially in the field of physics and electronics.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | acquire problem solving skills on Fourier Series, Fourier <br> Transforms and Laplace Transforms | K1, K6 |
| $\mathbf{C O 2}$ | gain familiarity in fundamental theories on Fourier Series, <br> Fourier Transforms and Laplace Transforms | K2, K5 |
| $\mathbf{C O 3}$ | evaluate some standard integrals by using Fourier Integrals | K1 |
| $\mathbf{C O 4}$ | understand different types of Fourier integrals. | K2, K4 |
| $\mathbf{C O 5}$ | apply Laplace transforms in solving ordinary differential <br> equations. | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I : The Laplace transforms: Definition - sufficient conditions for the (9 hrs) existence of the Laplace transform - Laplace transform of periodic functions - some general theorems
Unit II : The inverse transforms.
Unit III : Applications to differential equations - solving simultaneous (9 hrs) equations and differential equations with variable coefficients.
Unit IV: Fourier series - even and odd functions - half - range Fourier series. (9 hrs)
Unit V : Fourier Transform - Complex form of Fourier integral formula - (9 hrs) Fourier integral theorem - properties of Fourier transform - Fourier cosine and Fourier sine transforms and their properties.

|  |  | SPECIAL FUNCTIONS | Elective | 3 | 2 | 1 | - | 3 |

## Course Objectives:

1. To invent knowledge of some special functions.
2. To familiarize with the properties of these functions.
3. To discover applications of these functions.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Visualize exponential, logarithmic and trigonometric <br> functions | K1 |
| $\mathbf{C O 2}$ | Appraise knowledge of beta and gamma functions | K5 |
| $\mathbf{C O 3}$ | Discover applications of gamma functions to multiple <br> integrals | K2 |
| $\mathbf{C O 4}$ | Adapt knowledge of Legendre's equation and their <br> orthogonal properties | K6 |
| $\mathbf{C O 5}$ | Examine Bessel's equation and their solution | K3 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: The exponential function - the logarithmic function - definition of $x^{a}-$ the trigonometric functions.
Unit II: Beta and gamma functions.
Unit III: Applications of Gamma functions to multiple integrals.
Unit IV: Legendre 's equation - solution - Legendre's function of the first and second kinds Orthogonal properties of Legendre's Polynomial.

Unit V: Bessel's equations and Bessel's functions - Definition and solution - Bessel's function of the first kind of order n - generating function- some trigonometric expansions involving Bessel's functions.

|  |  | MATHEMATICAL LOGIC | Elective | 3 | 2 | $\mathbf{1}$ | - | 3 |

## Course Objectives:

1. To illustrate various proof techniques.
2. To administer knowledge of conjunctive and disjunctive normal forms.
3. To familiarize students about axiom of choice, ordinals and cardinals.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :--- |
| CO1 | Adapt various proof techniques | K6 |
| CO2 | Tabulate truth tables, conditional and biconditional <br> statements | K1 |
| CO3 | Represent tautology, disjunctive and conjunctive normal <br> forms | K2 |
| $\mathbf{C O 4}$ | Employ axiom of choice and Zorn's lemma | K3 |
| $\mathbf{C O 5}$ | Categorize ordinals and cardinals | K4 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Mathematical Induction - Techniques of proof.
Unit II: Mathematical logic - Statements and notations - connectives - statement formulas and truth tables - conditional and biconditional statements - well formed formulas. (9 hours) Unit III: Tautology - equivalence of formulas - duality law - principal disjunctive and conjunctive normal forms.
Unit IV: Axiom of choice - Zorn's lemma - well - ordering - Zermelo's theorem - Schroder-
Bernstein theorem.
Unit V: Ordinals and Cardinals.

|  |  | ASTRONOMY | Elective | $\mathbf{3}$ | 2 | $\mathbf{1}$ | - | $\mathbf{3}$ |

## Course Objectives:

1. To familiarize students with knowledge of the material universe beyond the earth's atmosphere and the nature and constitution of heavenly bodies.
2. To promote knowledge on the topics spherical trigonometry, the zones of earth, refraction, laws of refraction, geocentric parallax and Kepler's laws.
3. To appraise that students gather knowledge about celestial bodies and their movements in the galaxy.

## Course Outcomes (COs):

On completion of this course the students will be able to

| Course <br> Outcome <br> No. | Course Outcome | Knowledge <br> Level <br> Upto |
| :---: | :--- | :---: |
| CO1 | Solve problems in spherical Trigonometry | K3 |
| $\mathbf{C O 2}$ | Evaluate terrestrial latitudes and longitudes | K5 |
| $\mathbf{C O 3}$ | Rewrite laws and effects of refraction | K6 |
| $\mathbf{C O 4}$ | Estimate effects of geocentric parallax | K4 |
| $\mathbf{C O 5}$ | Interpret Kepler's laws and deduce its applications | K2 |
| K1=Remember, K2=Understand, K3=Apply, K4=Analyze, K5=Evaluate, K6= Create |  |  |

## Course Outline:

Unit I: Spherical Trigonometry - Celestial sphere- Diurnal motion.
Unit II: Earth - the zones of Earth - Terrestrial latitudes and longitudes - radius of earth rotation of earth - Dip of horizon - Twilight.
Unit III: Refraction laws of refraction - effects of refraction - cassini's formula horizontal refraction.
Unit IV: Geocetric parallax - effects - horizontal parallax of moon - angular diameter comparison of geocentric parallax and refraction.

Unit V: Kepler's laws - longitude of perigee - eccentricity of earth's orbit - verification of Kepler's laws in the case of Earth Newton's deductions form Kepler's laws mean anomaly Geocentric and heliocentric latitudes and longitudes.
