MANONMANIAM SUNDARANAR UNIVERSITY, TIRUNELVELI DEPARTMENT OF CHEMISTRY INTEGRATED M.Sc. CHEMISTRY PROGRAMME (CBCS) (3 + 2 = 5 years) PROGRAM STRUCTURE & SYLLABUS

(Adapted from TANSCHE UG Chemistry Syllabus for first 3 Years)

1. Vision & Mission of the University

<u>Vision</u>

1. To provide quality education to reach the un-reached

<u>Mission</u>

- 1. To conduct research, teaching and outreach programmes to improve conditions of human living.
- 2. To create an academic environment that honors women and men of all races, caste, creed, cultures, and an atmosphere that values intellectual curiosity, pursuit of knowledge, academic freedom and integrity.
- 3. To offer a wide variety of off-campus educational and training programs, including the use of information technology, to individuals and groups.
- 4. To develop partnership with industries and government so as to improve the quality of the workplace and to serve as catalyst for economic and cultural development.
- 5. To provide quality / inclusive education, especially for the rural and un-reached segments of economically downtrodden students including women, socially oppressed and differently abled.

2. Vision of the department

<u>Vision</u>

To develop a Centre of Excellence for teaching as well a research at par with national and international standards. Reach a position of distinction by offering first-class education and serving the community in relevant areas of interest to the rural areas.

Mission

- Provide an educational environment where students can realize their full potential in chemistry and attain quality education to face the challenges of the future.
- Provide a dynamic, challenging and ethical environment for pursuing high-quality teaching, learning, research and service.

3. INTRODUCTION

B.Sc. Chemistry: Programme Outcome, Programme Specific Outcome and Course Outcome

Chemistry is the study of composition and transformation of matter. A science that is central to energy production, health care, new material development for electronics and other applied fields and environmental protection. Bachelor's degree in Chemistry is the culmination of in-depth knowledge of Inorganic, Organic and Physical chemistry and specialized courses such as Pharmaceutical Chemistry, spectroscopy, Nanoscience, Forensic Science, Cosmetics & Personal Grooming, Food chemistry, Dairy Chemistry and so on. Thus, this programme helps learners in building a solid foundation for higher studies in Chemistry. The hands on experience the students gain in Practicals enable them to apply theory to solve problems in everyday life, think critically and innovatively. An aptitude for research is instilled through project work and industrial internship.

Students completing this programme will be able to present the concepts of Chemistry clearly and precisely. They can find solutions to pressing problems that mankind is facing today. They can interpret data and present their findings to both scientific community and laymen and ehave ability to work as a team and evolve to become an entrepreneur

Completion of this programme will also enable the learners to join teaching profession, conducting research in Industry and Government run research labs. A B.Sc chemistry student has the option to diversify to other branches such as Biochemistry, Biotechnology, Forensic Science etc... They have employability opportunities in public and private sector jobs in energy, pharmaceutical, Food, cosmetic industries etc...

PROGRAMME OUTCOMES (PO) OF B.SC DEGREE PROGRAMME IN CHEMISTRY

- Students will possess basic subject knowledge required for higher studies, professional and applied courses
- Students will acquire basic Practical skills & Technical knowledge along with domain knowledge of different subjects in the science & humanities stream.
- Students will develop scientific aptitude Integrate skills of analysis, critiquing, application and creativity.
- Students will employ appropriate digital tools and techniques necessary in analysing data and creative design.

- Students will gain competence to pursue higher learning, research and careers or will be able to opt for entrepreneurship
- Students will interact meaningfully with others displaying leadership and coordination in executing projects.
- Students will demonstrate responsibility as citizens committed to national development through community outreach, wellness of self and a sustainable environment.

PROGRAMME SPECIFIC OUTCOMES

- **PSO1**: Students acquire in-depth knowledge of the fundamental concepts in all disciplines of chemistry.
- **PSO2**: Students can disseminate the basics of chemistry and advanced topics and analytical skills in organic, inorganic and physical chemistry.
- PSO3: Students will be able develop creativity in academics and research.
- **PSO4:** Students will be able apply digital tools to collect, analyse and interpret data and present scientific findings.
- **PSO5:** gain competence to pursue higher education and career opportunities in chemistry and allied fields.
- **PSO6:** exhibit leadership qualities to work individually and within a team in organizing curricular, co-curricular and extracurricular activities.
- **PSO7:** apply the concepts of chemistry to solve problems in the community, entrepreneurial and research pursuits.
- **PSO8:** exhibit competence in educational, industrial and research pursuits that contribute towards the holistic development of self and community.

1. Highlights of the Revamped Curriculum:

Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.

- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, enable the students to provide solutions to industry / real life situations. The curriculum also facilitates peer learning and research aptitude in the final semester by providing an opportunity do a project.
- The General Studies and Chemistry based problem solving skills are included as mandatory components in the 'Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial internship is newly introduced in the fourth semester, to expose the students to real life working environment and train the students to face challenges
- > The Internship during the second year vacation will help the students gain valuable work
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting an experiment collecting and interpreting data and finally presenting the findings is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest - Nanoscience

Value additions in the Revamped Curriculum:

Semester	Newly introduced	Outcome / Benefits
	Components	
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning chemistry.	 Instil confidence among students Create interest for the subject
I, II, III, IV	Skill Enhancement papers (Discipline centric / Generic Entrepreneurial)	 Industry ready graduates Skilled human resource Students are equipped with essential skills to make them employable Training on entrepreneurial skills enable the students to gain knowledge and make them ready for start-up. Provides an opportunity for independent livelihood. Generates self – employment. Creates small scale entrepreneurs. Training to girls leads to women empowerment. Skill enhancement courses help the students to gain internships, apprenticeships, field work involving data collection, compilation, analysis etc. Enables the students to learn the operations of instruments. Improves self-confidence. Learns different analytical techniques. Discipline specific course helps to recognise, identify, examine and testify any and every kind of physical evidence mostly found in crime scenes.
		• It improves the technical knowhow of solving real life problems.
I, II, III, IV, V & VI	Elective papers- An open choice of topics categorized under Generic and Discipline Centric	 Strengthening the domain knowledge Introducing the stakeholders to the State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature Students are exposed to latest topics on Computer Science / IT, physics and mathematics. Emerging topics in higher education / industry /

		 communication network / health sector etc. are introduced with hands-on-training. Exposure to industry moulds students into solution providers. Generates Industry ready graduates. Employment opportunities enhanced.
II year Vacation activity	Internship / Industrial Training	• Practical training at the Industry/ Private/ Public sector organizations / Educational institutions, enable the students gain professional experience and also become responsible citizens.
V	Project with Viva – voce	 Self-learning is enhanced. Application of the concept to real situation is conceived resulting in tangible outcome. Helps to explore industries and to have first-hand experience in industrial background.(when students carry out projects in industries) Instil confidence and problem solving approach.
VI	Introduction of Professional Competency component	 Curriculum design accommodates all category of learners; 'Training for Competitive Examinations' – caters to the needs of the aspirants towards most sought - after services of the nation viz, UPSC, NDA, Banking Services, CAT, JAM, TNPSC group services, etc.
Extra Cred For Advan degree	lits: ced Learners / Honors	• To cater to the needs of peer learners / research aspirants

Course Outline	UNIT I A	tomic struc	ture	and Perio	dic t	rends					
	UNIT I Atomic structure and Periodic trends History of atom (J.J.Thomson, Rutherford); Moseley's Experiment and Atomic number, Atomic Spectra; Black-Body Radiation and Planck's quantum theory - Bohr's model of atom;The Franck-Hertz Experiment; Interpretation of H- spectrum; Photoelectric effect, Compton effect; Dual nature of Matter- De- Broglie wavelength-Davisson and Germer experiment Heisenberg's Uncertainty Principle; Electronic Configuration of Atoms and ions- Hund's rule, Pauli'exclusion principle and Aufbau principle; Numerical problems involving the core concepts.										

Unit II Introduction to Quantum mechanics Classical mechanics, Wave mechanical model of atom, distinction between a Bohr orbit and orbital; Postulates of quantum mechanics; probability interpretation of wavefunctions, Formulation of Schrodinger wave equation - Probability and electron density-visualizing the orbitals -Probability density and significance of Ψ and Ψ^2 .
Modern Periodic Table
Cause of periodicity ; Features of the periodic table; classification of elements - Periodic trends for atomic size- Atomic radii, Ionic, crystal and Covalent radii; ionization energy, electron affinity, electronegativity-electronegativity scales, applications of electronegativity.
Problems involving the core concepts
UNIT-III: Structure and bonding - I
Ionic bond
Lewis dot structure of ionic compounds; properties of ionic compounds; Energy involved in ionic compounds; Born Haber cycle – lattice energies, Madelung constant; relative effect of lattice energy and solvation energy; Ion polarisation – polarising power and polarizability; Fajans' rules - effects of polarisation on properties of compounds; problems involving the core concepts.
Covalent bond
Shapes of orbitals, overlap of orbitals – σ and Π bonds; directed valency - hybridization; VSEPR theory - shapes of molecules of the type AB ₂ , AB ₃ , AB ₄ , AB ₅ , AB ₆ and AB ₇
Partial ionic character of covalent bond-dipole moment, application to

UNIT-IV: Structure and bonding - II
VB theory – application to hydrogen molecule; concept of resonance - resonance structures of some inorganic species – CO_2 , NO_2 , CO_3^{2-} , NO_3^{-} ; limitations of VBT; MO theory - bonding, antibonding and nonbonding orbitals, bond order; MO diagrams of H ₂ , C ₂ , O ₂ , O ₂ ⁺ , O ₂ ⁻ , O ₂ ⁻² N ₂ , NO, HF, CO;
magnetic characteristics, comparison of VB and MO theories.
Coordinate bond: Definition, Formation of BF ₃ , NH ₃ , NH ₄ ⁺ , H ₃ O ⁺ properties
Metallic bond-electron sea model, VB model; Band theory-mechanism of conduction in solids; conductors, insulator, semiconductor – types, applications of semiconductors
Weak Chemical Forces - Vander Waals forces, ion-dipole forces, dipole-dipole interactions, induced dipole interactions, Instantaneous dipole-induced dipole interactions. Repulsive forces; Hydrogen bonding – Types, special properties of water, ice, stability of DNA; Effects of chemical force, melting and boiling points.
UNIT-V: Basic concepts in Organic Chemistry and Electronic effects
Types of bond cleavage – heterolytic and homolytic; arrow pushing in organic reactions; reagents and substrates; types of reagents - electrophiles, nucleophiles, free radicals; reaction intermediates – carbanions, carbocations, carbenes, arynes and nitrynes. Inductive effect - reactivity of alkyl halides, acidity of halo acids, basicity of amines; inductomeric and electromeric effects.
Resonance – resonance energy, conditions for resonance - acidity of phenols, basicity of aromatic amines, stability of carbonium ions, carbanions and free
radicals, reactivity of vinyl chloride, dipole moment of vinyl chloride and nitrobenzene, bond lengths; steric inhibition to resonance.
Hyperconjugation - stability of alkenes, bond length, orienting effect of methyl group, dipole moment of aldehydes and nitromethane
Types of organic reactions- addition, substitution, elimination and rearrangements

On completion of the course the students should be able to

- **CO1:** explain the atomic structure, wave particle duality of matter, periodic properties bonding, and properties of compounds.
- **CO2:** classify the elements in the periodic table, types of bonds, reaction intermediates electronic effects in organic compounds, types of reagents.
- CO3: apply the theories of atomic structure, bonding, to calculate energy of a spectral transition, Δx , Δp electronegativity, percentage ionic character and bond order.
- **CO4:** evaluate the relationship existing between electronic configuration, bonding, geometry of molecules and reactions; structure reactivity and electronic effects
- **CO5:** construct MO diagrams, predict trends in periodic properties, assess the properties of elements, and explain hybridization in molecules, nature of H bonding and organic reaction mechanisms.

the course	• chemis	try of acids,	, base	es and ioni	c equ	ilibrium				
	 proper 	ties of s and	p-blo	ock elemer	nts					
	• chemis	try of hydro	ocarb	ons						
	application	itions of acid	ds an	d bases						
					ts and	l hydrocarbons				
	compo									
Course Outline	UNIT-I									
		es and Ioni	-							
	Concepts of	of Acids and	d Bas	es - Arrhe	enius	concept, Brons	sted-Lowry concept,			

Lewis concept; Relative strengths of acids, bases and dissociation constant; dissociation of poly basic acids, ionic product of water, pH scale, pH of solutions; Degree of dissociation, common ion effect, factors affecting degree of dissociation; acid base indicators, theory of acid base indicators – action of phenolphthalein and methyl orange, titration curves - use of acid base indicators; Buffer solutions – types, mechanism of buffer action in acid and basic buffer, Henderson-Hasselbalch equation; Salt hydrolysis - salts of weak acids and strong bases, weak bases and strong acids, weak acids and weak bases - hydrolysis constant, degree of hydrolysis and relation between hydrolysis constant and degree of hydrolysis; Solubility product - determination and applications; numerical problems involving the core concepts.
Unit-II
Chemistry of s - Block Elements Hydrogen: Position of hydrogen in the periodic table. Alkali metals: Comparative study of the elements with respect to oxides, hydroxides, halides, carbonates and bicarbonates. Diagonal relationship of Li with Mg. Preparation, properties and uses of NaOH, Na ₂ CO ₃ , KBr, KClO ₃ alkaline earth metals. Anomalous behaviour of Be.
Chemistry of p- Block Elements (Group 13 & 14) preparation and structure of diborane and borazine. Chemistry of borax. Extraction of Al and its uses. Alloys of Al. comparison of carbon with silicon. Carbon-di-sulphide – Preparation, properties, structure and uses. Percarbonates, per monocarbonates and per dicarbonates.
UNIT-III
Chemistry of p- Block Elements (Group 15-18) General characteristics of elementsof Group 15; chemistry of H ₂ N-NH ₂ , NH ₂ OH, HN ₃ and HNO ₃ . Chemistry of PH ₃ , PCl ₃ , PCl ₅ , POCl ₃ , P ₂ O ₅ and oxy acids of phosphorous (H ₃ PO ₃ and H ₃ PO ₄).
General properties of elements of group16 - Structure and allotropy of elements - chemistry of ozone - Classification and properties of oxides - oxides of sulphur and selenium – Oxy acids of sulphur (Caro's and Marshall's acids).
Chemistry of Halogens: General characteristics of halogen with reference to electro-negativity, electron affinity, oxidation states and oxidizing power. Peculiarities of fluorine. Halogen acids (HF, HCl, HBr and HI), oxides and oxy acids (HClO ₄). Inter-halogen compounds (ICl, ClF ₃ , BrF ₅ and IF ₇), pseudo halogens [(CN) ₂ and (SCN) ₂] and basic nature of Iodine.
Noble gases: Position in the periodic table. Preparation, properties and structure of XeF_2 , XeF_4 , XeF_6 and $XeOF_4$; uses of noble gases - clathrate compounds.

	UNIT-IV
	Hydrocarbon Chemistry-I Petroproducts: Fractional distillation of petroleum; cracking, isomerisation, alkylation, reforming and uses
	Alkenes -Nomenclature, general methods of preparation – Mechanism of β - elimination reactions – E_1 and E_2 mechanism - factors influencing – stereochemistry – orientation – Hofmann and Saytzeff rules. Reactions of alkenes – addition reactions – mechanisms – Markownikoff's rule, Kharasch effect, oxidation reactions – hydroxylation, oxidative degradation, epoxidation, ozonolysis; polymerization.
	Alkadienes Nomenclature - classification – isolated, conjugated and cumulated dienes; stability of conjugated dienes; mechanism of electrophilic addition to conjugated dienes - 1, 2 and 1, 4 additions; free radical addition to conjugated dienes – Diels – Alder reactions – polymerisation – polybutadiene, polyisoprene (natural rubber), vulcanisation, polychloroprene.
	Alkynes Nomenclature; general methods of preparation, properties and reactions; acidic nature of terminal alkynes and acetylene, polymerisation and isomerisation.
	Cycloalkanes: Nomenclature, Relative stability of cycloalkanes, Bayer's strain theory and its limitations. Conformational analysis of cyclohexane, mono and di substituted cyclohexanes. Geometrical isomerism in cyclohexanes.
	UNIT-V Hydrocarbon Chemistry - II Benzene: Source, structure of benzene, stability of benzene ring, molecular orbital picture of benzene, aromaticity, Huckel's (4n+2) rule and its applications. Electrophilic substitution reactions - General mechanism of aromatic electrophilic substitution - nitration, sulphonation, halogenation, Friedel-Craft's alkylation and acylation. Mono substituted and disubstituted benzene - Effect of substituent – orientation and reactivity. Polynuclear Aromatic hydrocarbons: Naphthalene – nomenclature, Haworth synthesis; physical properties, reactions – electrophilic substitution reaction, nitration, sulphonation, halogenation, Friedel – Crafts acylation & alkylation, preferential substitution at □ - position – reduction, oxidation – uses. Anthracene – synthesis by Elbs reaction, Diels – Alder reaction and Haworth synthesis; physical properties; reactions - Diels-Alder reaction, preferential substitution at C-9 and C-10; uses.

	http://nptel.ac.in/courses/104101090/

On completion of the course the students should be able to

- **CO1:** explain the concept of acids, bases and ionic equilibria; periodic properties of s and p block elements, preparation and properties of aliphatic and aromatic hydrocarbons
- **CO2:** discuss the periodic properties of sand p- block elements, reactions of aliphatic and aromatic hydrocarbons and strength of acids
- **CO3:** classify hydrocarbons, types of reactions, acids and bases, examine the properties s and p-block elements, reaction mechanisms of aliphatic and aromatic hydrocarbons
- **CO4:** explain theories of acids, bases and indicators, buffer action and important compounds of s-block elements
- **CO5:** assess the application of hard and soft acids indicators, buffers, compounds of s and pblock elements and hydrocarbons

	UNIT III
	Preparation of Organic Compounds
	 i. Nitration - picric acid from Phenol ii. Halogenation - p-bromo acetanilide from acetanilide iii. Oxidation - benzoic acid from Benzaldehyde iv. Microwave assisted reactions in water: v. Methyl benzoate to Benzoic acid vi. Salicylic acid from Methyl Salicylate vii. Rearrangement - Benzil to Benzoic Acid viii. Hydrolysis of benzamide to Benzoic Acid
	Separation and Purification Techniques (Not for Examination)
	1. Purification of organic compounds by crystallization (from water / alcohol) and distillation
	2. Determination of melting and boiling points of organic compounds.
	3. Steam distillation - Extraction of essential oil from citrus fruits/eucalyptus leaves.
	4. Chromatography (any one) (Group experiment)
	(i) Separation of amino acids by Paper Chromatography
	 (ii) Thin Layer Chromatography - mixture of sugars / plant pigments /permanganate dichromate.
	(iii) Column Chromatography - extraction of carotene, chlorophyll and xanthophyll from leaves / separation of anthracene - anthracene picrate.
	5. Electrophoresis – Separation of amino acids and proteins. (Demonstration)
	 Isolation of casein from milk/Determination of saponification value of oil or fat/Estimation of acetic acid from commercial vinegar. (Any one Group experiment) (4,5& 6–not for ESE)

Prerequisites	General Ch	nemistry – I	and	Ι					
Objectives of	This cours	e aims to pro	ovide	a compre	hensi	ive knowledge	on		
the course							ray diffraction of		
	• fundan	nentals of nu	iclear	· chemistry	' and	nuclear waste	management.		
	application	tions of nuc	lear	energy					
	basic cl alcoho		halo-	organic co	mpo	unds, phenol ar	nd other aromatic		
	• prepara	ation and pr	opert	ties of pher	iols a	nd alcohols.			
Course Outline	UNIT I								
	Gaseous s	tate							
	Kinetic molecular model of a gas: postulates and derivation from the kinetic gas equation; The Maxwell –Boltzmann distribution of speed of molecules- average, root mean square and most probable velocity and average kinetic energy, law of equipartition of energy, degrees of freedom and molecular basis of heat capacities. Collision frequency; collision diameter; mean free path and viscosity of gases. Real gases: Deviations from ideal gas behaviour, (Andrew's and Amagat's plots); compressibility factor, Z, and its variation with pressure for different gases. equations of states for real gases-van der Waal's equation; Virial equation; Boyle temperature; Numerical problems based on equations of states for real gases – critical phenomena – isotherms of CO ₂ - continuity of state–Van der waal's equation and the critical state; law of corresponding states-liquefaction of gases; numerical problems involving the core concepts.								
	Unit-II								
	Liquid and Solid StateProperties of Liquids- Surface tension, viscosity and their applications.Crystalline and amorphous – differences - geometry, isotropy and anisotropymelting point; isomorphism, polymorphism.Crystals –size and shape; laws of crystallography; symmetry elements – planecentre and axis; Miller indices, unit cells and space lattices; classification o								
						-	ragg's equation		

Packing in atomic solids – simple cubic, body centered cubic, face centered and hexagonal close packing; Co-ordination number in typical structures -NaCl, CsCl, ZnS, TiO₂; comparison of structure and properties of diamond and graphite;.numerical problems involving core concepts Defects in solids - stoichiometric and nonstoichiometric defects.

Liquid crystals – classification and applications.

UNIT-III

Nuclear Chemistry

Natural radioactivity - α , β and y rays; half-life period; Fajan–Soddy group displacement law; Geiger–Nattal rule; isotopes, isobars, isotones, mirror nuclei, iso diaphers; nuclear isomerism; radioactive decay series; magic numbers; units – Curie, Rutherford, Roentgen; nuclear stability - neutron-proton ratio; binding energy; packing fraction; mass defect. Simple calculations involving mass defect and B.E., decay constant and $t_{1/2}$ and radioactive series.

Isotopes – uses – tracers – determination of age of rocks by radiocarbon dating. (Problems to be worked out)

Nuclear energy; nuclear fission and fusion – major nuclear reactors in India; radiation hazards, disposal of radioactive waste and safety measures.

UNIT-IV

Halogen derivatives

Aliphatic halogen derivatives

Nomenclature and classes of alkyl halides – isomerism, physical properties, Chemical reactions. Nucleophilic substitution reactions – $S_N 1$, $S_N 2$ and $S_N i$ mechanisms with stereochemical aspects and effect of solvent.

Di, Tri & Tetra Halogen derivatives: Nomenclature, classification, preparation, properties and applications.

Aromatic halogen compounds

Nomenclature, preparation, properties and uses Mechanism of nucleophilic aromatic substitution – benzyne intermediate.

Aryl alkyl halides

Nomenclature, benzyl chloride - preparation - preparation properties and uses

Alcohols: Nomenclature, classification, preparation, properties, use; conversions – ascent and descent of series; test for hydroxyl groups. Oxidation of diols by periodic acid and lead tetraacetate.

	 UNIT-V Phenols Nomenclature; classification, Preparation from diazonium salts, cumene, Dow's process, Raching process; properties – acidic character and effect of substitution on acidity. Reactions – Fries, claisen rearrangement, Electrophilic substitution reactions, Reimer - Teimen, Kolbe, Schmidt, Gatermann synthesis, Libermann, nitro reaction, phthalein reaction. Resorcinol, quinol, picric acid – preparation, properties and uses. Aromatic alcohols Nomenclature, benzyl alcohol – methods of preparation – hydrolysis, reduction of benzaldehyde, Cannizzaro reaction, Grignard synthesis, physical properties, reactions – reaction with sodium, phosphorus pentachloride, thionyl chloride, acetic anhydride, hydrogen iodide, oxidation – substitution on the benzene nucleus, uses. Thiols: Nomenclature, structure, preparation and properties.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination)	Questions related to the above topics, from various competitive examinations UPSC/JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired	Knowledge, Problem solving, Analytical ability, Professional Competency,
from this course	Professional Communication and Transferable skills.

	Introduction to organic chemistry

On completion of the course the students should be able to

CO1: explain the kinetic properties of gases by using mathematical concepts.

- **CO2:** describe the physical properties of liquid and solids; identify various types of crystals with respect to its packing and apply the XRD method for crystal structure determinations.
- **CO3:** investigate the radioactivity, nuclear energy and it's production, also the nuclear waste management.
- **CO4:** write the nomenclature, physical & chemical properties and basic mechanisms of halo organic compounds and alcohols.
- **CO5:** investigate the named organic reactions related to phenol; explain the preparation and properties of aromatic alcohol including thiol.

Course Outline	UNIT -I							
	Food Chemistry							
	Food adulteration-contamination of food items with clay stones, water andtoxicchemicals -Common adulterants.							
	Food additives, Natural and synthetic anti-oxidants, glazing agents (hazardous effect),food colourants, Preservatives, leavening agents, Baking powder and baking soda, yeast,MSG,vinegar. Dyes							
	Classification – Natural, synthetic dyes and their characteristics – basic methods and principles of dyeing							
	UNIT II							
	Hands on Experience (Students can choose any four)							
	Detection of adulterants in food items like coffee, tea, pepper, chilli powder, turmeric powder, butter, ghee, milk, honey etc., by simple techniques. Preparation of Jam, squash and Jelly, Gulkand, cottage cheese.							
	Preparation of products like candles, soap, detergents, cleaning powder, shampoos, pain balm, tooth paste/powde rand disinfectants in small scale.							
	Extraction of oils from spices and flowers.							
	Testing of water samples using testing kit. Dyeing – cotton fabrics with natural and synthetic dyes Printing – tie and dye, batik.							
Skills acquired	Entrepreneurial skills.

Objectives of	This cours	e aims to pro	ovide	a comprel	hensi	ve knowledge o	n	
the course	asp • the • tran stu • the	 thermodynamic concepts on chemical processes and applied aspects. thermo chemical calculations transition elements with reference to periodic properties and group study of transition metals. 						
Course Outline	isolated, cl cyclic, reve Concept a enthalpy (expansion conditions	ogy – Inter osed and op ersible and i nd significa (H); calcula of ideal	en sy rreve ance tions and etwe	vstems; isc ersible pro of heat (<u>s of q, w,</u> real gase een heat c	other cesse (q), v E an es ur	mal, adiabatic, is es; First law of th vork (w), inten id H for revers ider isotherma	path functions; sobaric, isochoric, nermodynamics – rnal energy (E), sible, irreversible al and adiabatic ; Joule Thomson	

Thermochemistry - heats of reactions, standard states; types of heats of reactions and their applications; effect of temperature (Kirchhoff's equations) and pressure on enthalpy of reactions; Hess's law and its applications; determination of bond energy; Measurement of heat of reaction – determination of calorific value of food and fuels Zeroth law of thermodynamics-Absolute Temperature scale.

Unit II

Thermodynamics II

Second Law of thermodynamics - Limitations of first law, spontaneity and randomness; Carnot's cycle; Concept of entropy, entropy change for reversible and irreversible processes, entropy of mixing, calculation of entropy changes of an ideal gas and a van der Waals gas with changes in temperature, volume and pressure, entropy and disorder.

Free energy and work functions - Need for free energy functions, Gibbs free energy, Helmholtz free energy - their variation with temperature, pressure and volume, criteria for spontaneity; Gibbs-Helmholtz equation – derivations and applications; Maxwell relationships, thermodynamic equations of state; Thermodynamics of mixing of ideal gases, Ellingham Diagram-application.

Third law of thermodynamics - Nernst heat theorem; Applications of third law - evaluation of absolute entropies from heat capacity measurements, exceptions to third law.

UNIT III

General Characteristics of d-block elements

Transition Elements- Electronic configuration - General periodic trend variable valency, oxidation states, stability of oxidation states, colour, magnetic properties, catalytic properties and tendency to form complexes. Comparative study of transition elements and non transition elements – comparison of II and III transition series with I transition series. Group study of Titanium, Vanadium, Chromium, Manganese, Iron, Cobalt, Nickel and Zinc groups

UNIT IV

Ethers, Thio ethers and Epoxides

Nomenclature, isomerism, general methods of preparations, reactions involving cleavage of C-O linkages, alkyl group and ethereal oxygen. Zeisel's method of estimation of methoxy group.

Reactions of epoxides with alcohols, ammonia derivatives and LiAH₄ Thioethers - nomenclature, structure, preparation, properties and uses.

Aldehydes and Ketones

	Nomenclatue, structure and reactivity of aliphatic and aromatic aldehydes and ketones; general methods of preparation and physical properties. Nucleophilic addition reactions, base catalysed reactions with mechanism- Aldol, Cannizzaro's reaction, Perkin reaction, Benzoin condensation, Haloform reaction, Knoevenagel reaction. Oxidation of aldehydes. Baeyer - Villiger oxidation of ketones. Reduction: Clemmensen reduction, Wolf - Kishner reduction, Meerwein – Pondorf Verley reduction, reduction with LiAlH4 and NaBH4. Addition reactions of unsaturated carbonyl compounds: Michael addition.
	UNIT V Carboxylic Acids : Nomenclature, structure, preparation and reactions of aliphatic and aromatic monocarboxylic acids. Physical properties, acidic nature, effect of substituent on acidic strength. HVZ reaction, Claisen ester condensation, Bouveault Blanc reduction, decarboxylation,
	Hunsdieckerreaction.Formic acid-reducing property. Reactions of dicarboxylic acids, hydroxy acids and unsaturated acids. Carboxylic acid Derivatives: Preparations of aliphatic and aromatic acid
	chlorides, esters, amides and anhydrides. Nucleophilic substitution reaction at the acyl carbon of acyl halide, anhydride, ester, amide. Schottan- Baumann reaction. Claisen condensation, Dieckmann and Reformatsky reactions, Hofmann bromamide degradation and Curtius rearrangement.
	Active methylene compounds: Keto – enol tautomerism. Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate
	Halogen substituted acids – nomenclature; preparation by direct halogenation, iodination from unsaturated acids, alkyl malonic acids
	Hydroxy acids – nomenclature; preparation from halo, amino, aldehydic and ketonic acids, ethylene glycol, aldol acetaldehyde; reactions – action of heat on α , β and yhydroxy acids.

	5. Determination of heat of hydration of copper sulphate.
	UNIT II
	Electrochemistry – Conductance measurements
	6. Determination of cell constant
	7. Determination of molar conductance of strong electrolyte
	8. Determination of dissociation constant of acetic acid
	Colorimetry
	9. Determination of concentration of copper sulphate solution
	UNIT III Colligative property
	10. Determination of molecular weight of an organic compound by Rast method using naphthalene or diphenyl as solvent
	Adsorption
	11. Construction of Freundlich isotherm for the adsorption of acetic acid on activated charcoal

On completion of the course the students should be able to CO1: describe the principles and methodology for the practical work

CO2: explain the procedure, data and methodology for the practical work.

CO3: apply the principles of electrochemistry, kinetics for carrying out the practical work.

CO4: demonstrate laboratory skills for safe handling of the equipment and chemicals

Course Outline	UNIT-I Qualitative and Quantitative Aspects of Analysis S. I Units, Distinction between Mass and Weight. Moles, Millimoles, Milli equivalence, Molality, Molarity, Normality, Percentage by Weight and Volume, ppm, ppb. Density and Specific Gravity of Liquids. Stoichiometry Calculations
	Sampling, evaluation of analytical data, Errors – Types of Errors, Accuracy, Precision, Minimization of Errors. Significant Figures. Methods of Expressing Precision: Mean, Median, Average Deviation, Standard Deviation, Coefficient of Variation, Confidence Limits, Q- test, F-test, T-test. The Least Square Method for Deriving Calibration plots.
	UNIT II Atomic Absorption Spectroscopy : Basic principles of instrumentation (choice of source, monochromator, detector, choice of flame and Burner designs. Techniques of atomization and sample introduction; Method of background correction, sources of chemical interferences and their method of removal. Techniques for the quantitative estimation of trace level of metal ions from water samples.
	UNIT III
	UV-Visible and IR Spectroscopy Origin of spectra, interaction of radiation with matter, fundamental laws of spetroscopy and selection rules, validity of Beer-Lambert's law.
	UV-Visible Spectrometry: Basic principles, instrumentation (choice of source, monochromator and detector) for single and double beam instrument; Basic principles of quantitative analysis: estimation of metal ions from aqueous solution, geometrical isomers, keto-enol tautomers. Infrared Spectroscopy: Basic principles of instrumentation (choice of source, monochromator& detector) for single and double beam instrument; sampling techniques.
	UNIT IV
	Thermal and Electro-analytical Methods of Analysis TGA and DTA- Principle, Instrumentation, methods of obtaining Thermograms, factors affecting TGA/DTA, Thermal analysis of silver nitrate, calcium oxalate and calcium acetate DSC- Principle, Instrumentation and applications.
	Electroanalytical methods: polarography - principle, instrumentation and applications. Derivative polarography- Cyclic Voltammetry - principle.

	UNIT V Separation and purification techniques
	Classification, principle, Factors affecting - Solvent Extraction – Liquid - Liquid Extraction, Chromatography: Column, TLC, Paper, Gas, HPLC and Electrophoresis, Principle, Classification, Choice of Adsorbents, Solvents, Preparation of Column, Elution Mechanism of separation: adsorption, partition & ion exchange. Development of chromatograms and Rf value.

On completion of the course the students should be able to

CO1: apply error analysis in the calibration and use of analytical instruments, explain theory, instrumentation and application of flame photometry and Atomic Absorption spectrometry

CO2: explain theory, instrumentation and application of UV visible and Infrared spectroscopy.

- **CO3:** able to discuss instrumentation, theory and applications of thermal and electrochemical techniques
- **CO4:** explain the use of chromatographic techniques in the separation and identification of mixtures
- **CO5:** explain preparation of solutions, stoichiometric calculations

Paper No.	Core IX							
Category	Core	Year	III	Credits	4	Course		
		Semester	V			Code		
Instructional	Lecture	Tutorial	Lab	Practice		Total		
hours per week	4	1	-			5		
Prerequisites		Chemistry I,						
Objectives of the course	 This course aims to provide an understanding of stereoisomerism in chirals and geometric isomerism in olefins, conformations of ethane and butane preparation and properties of aromatic and aliphatic nitro compounds and amines preparation of different dyes, food colour and additives preparation and properties of five membered heterocycles like pyrrole, furan and thiophene preparation and properties of six membered heterocycles like 							
Course Outline	 pyridine, quinoline and isoquinoline. UNIT I Stereochemistry Fischer Projection, Newmann and Sawhorse Projection formulae and their interconversions; Geometrical isomerism:cis-trans, syn-anti isomerism, E/Z notations. Optical Isomerism: Optical activity, specific rotation, asymmetry, enantiomers, distereoisomers, meso structures - molecules with one and two chiral centres, racemisation- methods of racemisation; resolution- methods of resolution. C.I.P rules. R and S notations for one and two chirality (stereogenic) centres. Molecules with no asymmetric carbon atoms – allenes and biphenyls. Conformational analysis of ethane and butane. 							
	Nitroalka Nomencl alkanes; Grignard Nitro - ac Aromatic Nomencl propertie	ature, isom physical p reagent, Ps i nitro tauto e nitro com ature, prep	erism roper seudo omeris pounc aratio s - red	, preparat ties; react acid chara sm. Is on – nitrati luction of p	ion tions acter on, s	s – reduction c. from diazoniu	lides, halo acids, , halogenations, m salts, physical fferent medium,	

Amines: Aliphatic amines

Nomenclature, isomerism, preparation – Hofmanns' degradation reaction, Gabriel's phthalimide synthesis, Curtius Schmidt rearrangement.

Physical properties, reactions – alkylation, acylation, carbylamine reaction, Mannich reaction,

oxidation, basicity of amines.

UNIT III

Chemistry of Nitrogen Compounds - II

Aromatic amines – Nomenclature, preparation – from nitro compounds, Hofmann's method; Schmidt reaction, properties - basic nature, ortho effect; reactions – alkylation, acylation, carbylamine reaction, reaction with nitrous acid, aldehydes, oxidation, Electrophilic substitution reactions, diazotization and coupling reactions; sulphanilic acid - zwitter ion formation.

Distinction between primary, secondary and tertiary amines - aliphatic and aromatic

Diazonium compounds

Diazomethane, Benzene diazonium chloride - preparations and synthetic applications.

Dyes

Theory of colour and constitution; classification based on structure and application; preparation – Martius yellow, aniline yellow, methyl orange, alizarin, indigo, malachite green. Industry oriented content

Dyes Industry, Food colour and additives

UNIT IV

Heterocyclic compounds

Nomenclature and classification. General characteristics - aromatic character and reactivity.

Five-membered heterocyclic compounds

Pyrrole – preparation - from succinimide, Paal Knorr synthesis; reactions – reduction, basic character, acidic character, electrophilic substitution reactions, ring opening.

Furan – preparation from mucic acid and pentosan; reactions – hydrogenation, reaction with oxygen, Diels Alder reactions, formation of thiophene and pyrrole; Electrophilic substitution reaction.

Thiophene synthesis - from acetylene; reactions –reduction; oxidation;

	electrophilic substitution reactions.
	UNIT V
	Six-membered heterocyclic compounds
	Pyridine – synthesis - from acetylene, Physical properties; reactions - basic character, oxidation, reduction, electrophilic substitution reactions; nucleophilic substitution- uses Condensed ring systems
	Quinoline – preparation - Skraup synthesis and Friedlander's synthesis; reactions – basic nature, reduction, oxidation; electrophilic substitutions; nucleophilic substitutions – Chichibabin reaction
	Isoquinoline – preparation by the Bischler – Napieralski reaction, reduction, oxidation; electrophilic substitution.

Partial molar properties – chemical potential, Gibbs Duhem equation, variation of chemical potential with temperature and pressure, chemical potential of a system of ideal gases, Gibbs- Duhem-Margules equation.									

UNIT II Chemical Kinetics

Rate of reaction - Average and instantaneous rates, factors influencing rate of reaction - molecularity of a reaction - rate equation - order of reaction. order and molecularity of simple and complex reactions, Rate laws - Rate constants – derivation of rate constants and characteristics for zero, first order, second and third order (equal initial concentration) – Derivation of time for half change with examples. Methods of determination of order of Volumetry, manometry and polarimetry.

Effect of temperature on reaction rate – temperature coefficient - concept of activation energy - Arrhenius equation. Theories of reaction rates – Collision theory – derivation of rate constant of bimolecular gaseous reaction – Failure of collision theory. Lindemann's theory of unimolecular reaction. Theory of absolute reaction rates – Derivation of rate constant for a bimolecular reaction – significance of entropy and free energy of activation. Comparison of collision theory and ARRT.

Complex reactions – reversible and parallel reactions (no derivation and only examples) – kinetics of consecutive reactions – steady state approximation.

UNIT III

Adsorption – Chemical and physical adsorption and their general characteristics- distinction between them Different types of isotherms – Freundlich and Langmuir. Adsorption isotherms and their limitations – BET theory, kinetics of enzyme catalysed reaction –Michaelis- Menten and Briggs- Haldene equation – Lineweaver- Burk plot – inhibition – reversible – competitive, noncompetitive and uncompetitive (no derivation of rate equations)

Catalysis – general characteristics of catalytic reactions, auto catalysis, promoters, negative catalysis, poisoning of a catalyst – theories of homogenous and heterogeneous catalysis – Kinetics of Acid – base and enzyme catalysis. Heterogenous catalysis

UNIT IV

Colloids and Surface Chemistry

Colloids: Types of Colloids, Characteristics Colloids (Lyophilic and Lyophobic sols),

Preparation of Sols- Dispersion methods, aggregation methods, Properties of Sols- Optical properties, Electrical properties - Electrical double layer, Electro Kinetic properties- Electro-osmosis, Electrophoresis,

Coagulation or precipitation, Stability of sols, associated colloids, Emulsions, Gels-preparation of Gels, Applications of colloids

	Macromolecules: Molecular weight of Macromolecules-Number average molecular weight- average molecular weight, Determination of Molecular weight of molecules
	UNIT V Photochemistry
	Laws of photo chemistry – Lambert – Beer, Grotthus – Draper and Stark – Einstein. Quantum efficiency. Photochemical reactions – rate law – Kinetics of H_2 - Cl_2 , H_2 - Br_2 and H_2 - I_2 reactions, comparison between thermal and photochemical reactions.
	Fluorescence – applications including fluorimetry – sensitised fluorescence, phosphorescence – applications - chemiluminescence and photosensitisation – examples Chemistry of Vision – 11 cis retinal – vitamin A as a precursor - colour perception of vision
Extended Professional Component (is a part of internal component only, Not to be included in the external examination	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)

Course Outline							
Course Outline	UNIT I						
	Survey of	Indian Indu	istrie	s and min	neral	resources in Ir	ndia
	v						
	Fuels: Classification, characteristics of fuels. Solid fuels: coal - classification; analysis of coal- proximate analysis and ultimate analysis;						
	 calorific value-determination, carbonisation of coal. Liquid fuels: Petroleum - characteristics; Gasoline aviation petrol- knocking in internal combustion engines, antiknock agents; unleaded petrol-octane number, cetane number. Gaseous fuel: advantages over solid and liquid fuels; water gas, producer gas, carburetted water gas - preparations - uses. Natural gas: LPG-composition, advantages, application; gobar gas-production, composition, advantages, application. Propellants - rocket fuels (basic idea) 						
	UNIT II Cosmetics						
	Skin care: powders, ingredients; creams and lotion-cleansing moisturising, all purpose shaving cream, sunscreen; make up preparations.					0.	
	Dental care	e: tooth paste	es – i	ngredients	5.		
			-	•			es, ingredients. ef constituents;

animal origin-amber gries, civetone and musk; synthetic-classification- esters-amylsalicylate alcohols-citronellol; terpeneols-gereniol and nerol; ketones-muskone, coumarin; aldehydes-vanilin.
Soaps and Detergents
Soaps-properties, manufacture of soap-batch process; types-transparent soap, toilet soap, powder soap and liquid soap – ingredients.
Detergents-definition, properties-cleansing action; soapless detergents- anionic, cationic and non-ionic (general idea only); uses of detergents as surfactants. Biodegradability of soaps and detergents.
UNIT III Sugar Industry
Manufacture from sugar cane; recovery of sugar from molasses; testing and estimation of sugar. Food Preservation and processing
Food spoilage – causes; Food preservation - methods – high temperature, low temperature, drying, radiation; Food additives – preservatives, flavours, colours, anti-oxidants, sweetening agents; hazards of using food additives; Food standards – Agmark and Codex alimentarius.
UNIT IV Abrasives
Definition, characteristics, types-natural and synthetic; natural abrasives – diamond, corundum, emery, garnet, quartz – composition, uses; synthetic abrasives – carborundum, aluminium carbide, boron carbide, boron nitride, synthetic graphite – composition and uses.
Leather Industry Structure and composition of skin, hide; Manufacture of leather – pre- tanning process – curing, liming, beating, pickling; methods of tanning- vegetable, chrome – one bath, two bath process; finishing.
Paper Industry Manufacture of pulp - mechanical, chemical processes; sulphate pulp, rag pulp; manufacture of paper- beating, refining, filling, sizing, colouring, calendaring; cardboard.
UNIT V Lubricants Definition, classification-liquid, semi-solid, solid and synthetic; properties-viscosity index, flash point, cloud point, pour point, aniline point and drop point; greases-properties, types; cutting fluids, selection of lubricants.

	Cement Industry
	Cement – types, raw materials; manufacture-wet process, constituent of cement, setting of cement; properties of cement-quality, setting time, soundness, strength; mortar, concrete, RCC; curing and decay of concrete.
	Intellectual Property Rights Introduction to Intellectual Property Rights – Patents - Factors for patentability - Novelty, Non obviousness, Industrial applications - Patent offices in India: Trademark - Types of trademarks- Certification marks, logos, brand names, signatures, symbols and service marks
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired	Knowledge, Problem solving, Analytical ability, Professional

Objectives of the	The course	e aims at pro	ovidir	ng knowled	dge o	n	

course	 relationship between biochemistry and medicine, composition of blood structure and properties of amino acids, peptides, enzyme, vitamins and proteins biological functions of proteins, enzymes, vitamins and hormones biochemistry of nucleic acids and lipids metabolism of lipids
Course Outline	• Inetabolishi of lipids UNIT I
	Logic of Living Organisms Relationship of Biochemistry and Medicine Blood - Composition of Blood, Blood Coagulation – Mechanism. Hemophilia and Sickle Cell Anaemia Maintenance of pH of Blood – Bicarbonate Buffer, Acidosis, Alkalosis.
	UNIT II
	Peptides and Proteins Amino acids – nomenclature, classification – essential and Non- essential; Synthesis - Gabriel Phthalimide, Strecker; properties – zwitter ion and isoelectric point, electrophoresis and reactions.
	Peptides – peptide bond – nomenclature – synthesis of simple peptides – solution and solid phase. Determination of structure of peptides, N-terminal analysis – Sanger's & Edmann method; C terminal analysis - Enzymic method.
	Proteins – classification based on composition, functions and structure; properties and reactions – colloidal nature, coagulation, hydrolysis, oxidation, denaturation, renaturation; colour tests for proteins; structure of proteins – primary, secondary, tertiary and quaternary. Metabolism of Amino acids – general aspects of metabolism (a brief outline); urea cycle.
	UNIT III
	Enzymes and Vitamins
	Nomenclature and classification, characteristics, factors influencing enzyme activity – mechanism of enzyme action – Lock and key hypothesis, Koshland's induced fit model.
	Proenzymes, antienzymes, coenzymes and isoenzymes; allosteric enzyme
	regulation.
	Vitamins as coenzymes – functions of TPP, lipoic acid, NAD, NADP, FMN, FAD, pyridoxal phosphate, CoA, folic acid, biotin,
	cyanocobalamin. UNIT IV
	Amino acids
	Components of nucleic acids - nitrogenous bases and pentose sugars, structure of nucleosides and nucleotides, DNA- structure & functions;

Hormones Adrenalin and thyroxine chemistry, structure and functions (N structure elucidation).	0
structure elucidation).	0
UNIT V	
Lipids	
Occurrence, biological significance of fats, classification of lipids.	
Simple lipids – Oils and fats, chemical composition, properties, reaction	
– hydrolysis, hydrogenation, trans-esterification, saponificatio	
rancidity; analysis of oils and fats – saponification number, iodine	
number, acid value, R.M. value. Distinction between animal and	l
vegetable fats.	
Compound lipids – Lipoproteins - VLDL, LDL, HDL, chylomicrons	-
biological significance.	
Cholesterol – occurrence, structure, test, physiological activity.	
Metabolism of lipids: $β$ -oxidation of fatty acids.

		llo enzymes		-	rt.		
	 silicat 	tes and their	appli	cations			
	• indus	trial applica	tions	of refractor	ries,	alloys, paints a	nd pigments
	 UNIT I Bioinorganic Chemistry Essential and trace elements: Role of Na⁺, K⁺, Mg²⁺, Ca²⁺, Fe³⁺, Cu²⁺ and Zn²⁺ in biological systems. Effect of excess intake (Toxicity) of Metal ions – trace elements - As, Cd, Pb, Hg. UNIT II Metal ion transport and storage Iron – storage, transport - Transferrin and Ferretin; Iron-porphyrins – myoglobin, haemoglobin – oxygen transport - Bohr effect; Sodium/potassium pump, calcium pump; transport and storage - copper and zinc. 						
	UNIT III Metallo enzymes Isomerase and synthetases, structure of cyanocobalamin (Vitamin B12), nature of Co-C bond; Metalloenzymes - functions of carboxy peptidase A, zinc metalloenzyme – mechanism and uses, Zn-Cu enzyme - structure and function, carbonic anhydrase, Vitamin B-12 as transferase and isomerase - Iron-sulphur proteins - 2Fe-2S – rubredoxin, 4Fe-2S – ferridoxin, Iron sulphur cluster enzymes. Invivo and Invitro nitrogen fixation – biological functions of nitrogenase and molybdo enzymes.						

	UNIT IV Silicates
	Introduction – general properties of silicates, structure – types of silicates – ortho silicates(zircon), pyrosilicates (thortveitite), chain silicates(pyroxenes), ring silicates(beryl), sheet silicates(talc, mica, asbestos), silicates having three dimensional structure (feldspars, zeolites, ultramarines)
	UNIT V Industrial Applications of Inorganic Compounds
	Refractories, pyrochemical, explosives. Alloys, Paints and pigments - requirements of a good paint; classification, constituents of paints – pigments, vehicles, thinners, driers, extenders, anti-knocking agents, anti-skinning agents, plasticizers, binders-application; varnishes- oils, spirit; enamels. Nanocomposite Hydrogels: synthesis, characterization and uses.
	Industrial visits and internship mandatory.

Course Learning Outcomes (for Mapping with POs and PSOs) On completion of the course the students should be able to

CO1: ability to explain the importance of tracer elements on biological system.

CO2: explain the metal ion transport, Bohr effect, Na, K, Ca pump.

CO3: explain the function of Vitamin B₁₂, Zn-Cu enzyme, ferredoxin, cluster enzymes.

CO4: classification and structure of silicates.

CO5: explain the manufacture of refractories, explosives, paints and pigments

UNIT IV Electrical Conductance and Transference

	Electrical Conductance and Transference
	Arrhenius theory of electrolytic dissociation – Ostwald's dilution law,
	limitations of Arrhenius theory; behavior of strong electrolytes -
	interionic effects – Debye Huckel theory –Onsager equation (no
	derivation), significance of Onsager equation, Debye Falkenhagen
	effect, Wien effect. Ionic mobility – Discharge of ions on electrolysis
	(Hittorf's theoretical device), transport number -determination -
	Hittorf's method, moving boundary method – factors affecting transport
	number – determination of ionic mobility; Kohlrausch's law-
	applications; molar ionic conductance and viscosity (Walden's rule);
	applications of conductance measurements – determination of - degree
	of dissociation of weak electrolyte, dissociation constant of weak acid
	and weak base, ionic product of water, solubility and solubility product
	of sparingly soluble salts - conductometric titrations – acid base
	titrations.
	UNIT V
	Galvanic Cells and Applications
	Galvanic cell, representation, reversible and irreversible cells, EMF and
	its measurement – standard cell; relationship between electrical energy
	and chemical energy; sign of EMF and spontaneity of a reaction,
	thermodynamics and EMF – calculation of Δ G, Δ H, and Δ S from EMF
	data; reversible electrodes, electrode potential, standard electrode
	potential, primary and secondary reference electrodes, Nernst equation
	for electrode potential and cell EMF; types of electrodes – metal/metal
	ion, metal amalgam/metal ion, metal, insoluble salt/anion, gas electrode,
	redox electrode; electrochemical series – applications of
	electrochemical series.Chemical cells with and without transport,
	concentration cells with and without transport;
	Applications of EMF measurements
	applications of EMF measurements – determination of activity
	coefficient of electrolytes, transport number, valency of ions, solubility
	product, pH using hydrogen gas electrode, quinhydrone electrode and
	glass electrode, potentiometric titrations – acid base titrations, redox
	titrations, precipitation titrations, ionic product of water and degree of
	hydrolysis; redox indicators - use of diphenylamine indicator in the
	titration of ferrous iron against dichromate.
	Industrial component
	Galvanic cells- lead storage, Ni-Cd, Li and Zn-air, Al-air batteries
	Fuel cells – H_2 - O_2 cell – efficiency of fuel cells.
	corrosion – mechanism, types and methods of prevention.

Course Learning Outcomes (for Mapping with POs and PSOs)

On completion of the course the students should be able to

- **CO1:** construct the phase diagram for one component and two component systems, explain the properties of freezing mixture, component with congruent melting points and solid solutions.
- **CO2:** apply the concepts of chemical equilibrium in dissociation of PCl₅, N₂O₄ and formation of HI, NH₃, SO₃ and decomposition of calcium carbonate. Demonstrate important principles such as Le chatelier principle, van't Hoff reaction isotherm and Clausius-Clayperon equation.
- **CO3:** Identify an appropriate distillation method for the separation of binary liquid mixtures such as azeotropic mixtures, partially miscible mixtures and immiscible liquids.
- **CO4:** Explain the significance of Arrhenius theory, Debye-Huckel theory, Onsager equation and Kohlrausch's law in conductance.
- **CO5:** Construct electrochemical cell with the help of electrochemical series and calculate cell EMF. Demonstrate the applications of EMF and significance of potentiometric titrations.

	UNIT III
	Infrared spectroscopy
	Vibration spectra -diatomic molecules - harmonic oscillator and
	anharmonic oscillator; Vibration – rotation spectra – diatomic molecule
	as rigid rotator and anharmonic oscillator (Born-Oppenheimer
	approximation oscillator) - selection rules, vibrations of polyatomic
	molecules – stretching and bending vibrations – applications –
	determination of force constant, moment of inertia and internuclear
	distance – isotopic shift – application of IR spectra to simple organic
	and inorganic molecules – (group frequencies)
	Raman Spectroscopy
	Rayleigh scattering and Raman scattering of light – Raman shift –
	classical theory of Raman effect – quantum theory of Raman effect –
	Vibrational Raman spectrum – selection rules – mutual exclusion
	principle – instrumentation (block diagram) – applications.
	UNIT IV
	Nuclear magnetic resonance spectroscopy:
	PMR – theory of PMR – instrumentation - number of signals – chemical
	shift – peak areas and proton counting – spin-spin coupling –
	applications. Problems related to shielding and deshielding of protons,
	chemical shifts of protons in hydrocarbons, and in simple
	monofunctional organic compounds; spin-spin splitting of neighbouring
	protons in vinyl and allyl systems.
	UNIT V
	Mass spectrometry
	Principle – different kinds of ionisation – instrumentation – the mass
	spectrum – types of ions – determination of molecular formula-
	fragmentation and structural elucidation – McLafferty rearrangement;
	Retro Diels Alder reaction - illustrations with simple organic molecules.
	Solving structure elucidation problems using multiple spectroscopic
	data (NMR, MS, IR and UV-Vis).

Prerequisites	Basics kno	wledge in ph	ysics ar	nd chemist	ry						
Objectives of the	This cours	se aims at pro	viding	knowledge	on						
course	 pro cha syr ass 	 This course aims at providing knowledge on introduction to nanoparticles/clusters and nanocomposites properties of nanomaterials characterization of nanomaterials by different methods synthesis of carbon nanotubes, graphene, quantum dots, self-assembled nanomaterials applications of nanomaterials as sensors 									

Course Outline	UNIT I						
	Introduction to nanoscience						
	Definition of terms – nanoscience, nanoparticles, clusters, quantum dots,						
	nanostructures and nanocomposites. Electron behaviour in free space,						
	bulk material and nanomaterials.						
	Synthesis and stabilization of nanomaterials						
	Top down approach (physical methods), mechanical dispersion – ball						
	milling, methods based on evaporation of a precursor-inert gas						
	condensation, ion sputtering, spray pyrolysis, aerosol synthesis-						
	nanolithography.						
	Bottom-up approach (chemical methods) - solvothermal synthesis,						
	photochemical method, gamma radiolysis, sonochemical synthesis,						
	electro deposition, sol-gel method, nanomaterials via chemical routes-						
	solvents reducing agents,						
	capping agents-stabilization of nanoparticles -electrostatic and steric						
	stabilization, common stabilizers, nanoparticle growth in solution,						
	templated growth, Langmuir – Blodgett (L-B) method, reverse micelles-						
	emulsion method.						
	Unit II						
	Properties of materials on a nanoscale						
	Optical properties of metal and semiconductor nanomaterials- surface						
	Plasmon resonance (SPR), surface enhanced Raman spectra (SERS),						
	uantum confinement effect, tuning of optical spectrum. Magnet						
	properties - Fe ₃ O ₄ particle, supra magnetic properties, electronic						
	properties, Chemical properties- chemical process on the surface of nanoparticles, catalysis, mechanical properties. UNIT III						
	Techniques employed for characterisation of nanomaterials						
	Spectrocopy – UV-visible, Photoelectron spectroscopy – Electron						
	microscopy - Scanning Electron Microscopy (SEM), Transmission						
	Electron Microscopy (TEM), Scanning probe microscopy (SPM) -						
	Atomic Force Microscopy (AFM), Scanning Tunneling Microscopy						
	(STM), Optical microscopy – confocal microscopy, X-ray diffraction						
	(XRD) [Principle and Block diagram only].						
	UNIT IV						
	Special nanomaterials						
	Carbon Nano Structures Carbon nanotubes: Introduction - types - zigzag,						
	armchair, helical, synthesis by CVD, Functionalization of Carbon						
	Nanotubes, Reactivity of Carbon Nanotubes, Field emission, Fuel Cells,						
	Display devices . Other Important Carbon based materials: Preparation and						
	1 1						
	Characterization Fullerene, Graphene, properties, DLC and nanodiamonds and Applications						
	Semiconductor nanoparticles: Quantum dots, synthesis – chemical						
	synthesis using clusters, properties, porous silicon – electrochemical						
	etching, aerogel – types – silica aerogel, resorcinol formaldehyde (RF)						
	aerogels, zeolites – applications.						
	Self Assembled Nanomaterials: Self Assembled Monolayers (SAMS) –						
	inorganic, organic molecules.						
	morganie, organie morecures.						

	UNIT V Application of nanomaterials
	Biomedical Applications- drug, drug delivery, biolabelling, artificial implants, cancer treatment. Sensors – Natural nanoscale sensors, chemical sensors, biosensors, electronic noses.
	Optics & Electronics – Nanomaterials in the next generation computer technology, high definition TV, flat panel displays, quantum dot laser,
	single electron transistors [SET]. Nanotechnology in agriculture – Fertilizer and pesticides nanomaterials for water purification, nanomaterials in food and packaging materials,
	fabric industry. Impacts of Nanotechnology – human & environmental safety risks.
Extended Professional	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved

UNIT IV

Reactions of Polymers-Hydrolysis, Acidolysis, Aminolysis, Addition and Substitution Reactions (One Example Each)

Cyclisation, Cross-Linking and Reactions of Specific Functional Groups in the Polymer

Polymer technology

Processing of polymers – casting, thermoforming, moulding – extrusion, compression, blow moulding – foaming, lamination, reinforcing – processing of fibres – melt, wet and dry spinning.

UNIT V

Speciality polymers

Polyelectrolytes, conducting polymers, polymeric supports for solid phase synthesis, biomedical polymers, liquid crystalline polymers, electroluminescent polymers – two examples of each of these polymers. Polyethylene, PVC, PMMA, polyester; rubber – synthetic and natural, vulcanisation of rubber.

Polymer Degradation

Types of Degradation - Thermal, Mechanical, Ultra Sound, Photo

	Radiation and Chemical Degradation Methods. Rubber-Natural and Synthetic-Structure, Mechanism of Vulcanisation Biodegradable and Non-Biodegradable Polymers.

Course Learning Outcomes (for Mapping with POs and PSOs)

On completion of the course the students should be able to

CO1: explain classification of polymers, elastomers, fibres and liquid resins

CO2: explain addition and condensation polymerization, mechanical properties of polymers **CO3:** determine the molecular weight of polymers, and explain the thermal properties of polymers

CO4:explain reactions of polymers and polymer processing

CO5:discuss speciality polymers like PVC, PMMA, rubbers, biodegradable polymers

course	• dr	drugs design and drug metabolism					
		portant India tibiotics	an meo	dicinal plar	nts, c	ommon diseases	s and

	drugs for major diseases like cancer, diabetes and AIDS
	 analgesics and antipyretic agents
	 significance of clinical tests
Course Outline	UNIT I
Course Outline	Introduction
	Important terminologies – drug, pharmacognosy, pharmacy, pharmacology, pharmacodynamics, pharmacokinetics, clinical pharmacology, pharmacotherapeutics, chemotherapy, toxicology, pharmacophore, antimetabolites, mutation, bacteria, virus, fungi, actinomycetes, vaccines, pharmacopeia, posology and therapeutic index.
	Sources of drugs – dosage forms – bio availability – routes of administration – absorption, distribution and elimination of drugs – drug metabolism – prescription terms.
	Structure and pharmacological activity Effect of – unsaturation, chain length, isomerism; groups - halogens amino, nitro, nitrite, cyano, acidic, aldehydic, keto, hydroxyl and alkyl groups.
	Development of Drugs Development of a drug – classic steps- lead compounds- comparison of traditional and modern methods of development of drugs – drug design by method of variation – disjunction and conjunction methods.
	Unit II Indian medicinal plants Some important Indian medicinal plants – tulsi, neem, kizhanelli, mango, semparuthi, adadodai, turmeric and thoothuvalai – uses.
	Common diseases and their treatment Causes, prevention and treatment of the following diseases: Insect borne diseases– malaria, filariasis, plague;Air borne diseases– diphtheria, whooping cough, influenza, measles, mumps, common cold, tuberculosis; Water borne diseases – cholera, typhoid, dysentery. Digestive system – jaundice; Respiratory system – asthma; Nervous system – epilepsy.
	Antibiotics Definition – classification – structure and therapeutic uses of chloramphenicol, penicillins , structure activity relationship of chloramphenicol ; therapeutic uses of ampicillin, streptomycin, erythromycin, tetracycline, rifamycin.
	UNIT III Drugs for major diseases Cancer – common causes – chemotherapy – anti neoplastic agents - classification –adverse effects of cytotoxic agents ; alkylating
	agents – chlorambucil ; anti metabolites – methotrexate, fluouracil ; Vinca alkaloids – vincristine, vinblastine.Diabetes– types –

	
	management of diabetes – insulin ; oral hypoglycemic agents - sulphonyl ureas – chlorpropamide ; biguanides - metformin – thiazolidinediones .Cardiovascular drugs– cardio glycosides ; anti arrhythmic agents – quinidine, propranolol hydrochloride ; anti- hypertensive drugs - Aldomet, pentoliniumtartarate; vasodilator- tolazoline hydrochloride, sodium nitroprusside.AIDS – causes, symptoms and prevention – anti HIV drugs - AZT, DDC.
	UNIT IV
	Analgesics and antipyretic agents Classification – action of analgesics – narcotic analgesics –morphine; synthetic analgesics – pethidine, methadone; antipyretic analgesics – salicylic acid derivatives, indolyl derivatives, p-aminophenol derivatives.
	Anaesthetics
	Definition, characteristics, classification - general anaesthetics – volatile anaesthetics – nitrous oxide, ethers, cyclopropane, chloroform, halothane, trichloro ethylene– storage, advantages and disadvantages ; non volatileanaesthetics – thiopental sodium ; local anaesthetics – requisites – advantages- esters – cocaine, benzocaine ; amides – lignocaine, cinchocaine.
	Blood and haemotological agents
	Blood– composition, grouping – physiological functions of plasma proteins – mechanism of clotting; Coagulants – vitamin K, protamine sulphate, dry thrombin; Anti coagulants – coumarins, citric acid and heparin; antifibrinolytic agents – aminocaproic acid and tranexamic acid.
	Anaemia– causes, types and control – anti anaemic drugs.
	UNIT V
	Clinical Chemistry Blood tests – blood count – complete haemotogram – Hb, RBC, GTT, TC, DC, platelets, PCV, ESR; bleeding and clotting time –- glucose
	tolerance test. Significance of Clinical Tests
	Serum electrolytes - blood Glucose - orthotoluidine method; Renal
	functions tests - blood urea, creatinine; liver function tests - serum proteins, albumin globulin ratio, serum bilirubin, enzymes SGOT, SGPT; lipid profile – cholesterol, triglycerides, HDL, LDL, coronary risk index. Urine examination – pH, tests for glucose, albumin and bile pigment.

and non-bonding orbitals. Molecular orbital diagrams for Hydrogen, Helium, Nitrogen; discussion of bond order and magnetic properties. Nuclear Chemistry: Fundamental particles - Isotopes, Isobars, Isotones and Isomers-Differences between chemical reactions and nuclear reactions - group displacement law. Nuclear binding energy mass defect - calculations. Nuclear fission and nuclear fusion differences – Stellar energy. Applications of radioisotopes - carbon dating, rock dating and medicinal applications.

Unit II

Industrial Chemistry

Fuels: Fuel gases: Natural gas, water gas, semi water gas, carbureted water gas, producer gas, CNG, LPG and oil gas (manufacturing details not required). Silicones: Synthesis, properties and uses of silicones.

Fertilizers: Urea, ammonium sulphate, potassium nitrate, NPK fertilizer, superphosphate, triple superphosphate.

UNIT III

Fundamental Concepts in Organic Chemistry

Hybridization: Orbital overlap, hybridization and geometry of CH4, C2H4, C2H2 and C6H6. Electronic effects: Inductive effect and consequences on K_a and K_b of organic acids and bases, electromeric, mesomeric, hyper conjugation and steric- examples.

Reaction mechanisms: Types of reactions–aromaticity (Huckel's rule) – aromatic electrophilic substitution; nitration, halogenation, Friedel-Craft's alkylation and acylation. Heterocyclic compounds: Preparation, properties of pyrrole and pyridine.

UNIT IV

Thermodynamics and Phase Equilibria

Thermodynamics: Types of systems, reversible and irreversible processes, isothermal and adiabatic processes and spontaneous processes. Statements of first law and second law of thermodynamics. Carnot's cycle and efficiency of heat engine. Entropy and its

	significance. Free energy change and its importance (no derivation).
	Conditions for spontaneity in terms of entropy and Gibbs free energy.
	Relationship between Gibbs free energy and entropy.
	Phase Equilibria: Phase rule - definition of terms in it. Applications of
	phase rule to water system. Two component system - Reduced phase
	rule and its application to a simple eutectic system (Pb-Ag).
	UNIT V
	Analytical Chemistry
	Introduction to qualitative and quantitative analysis. Principles of volumetric analysis. Separation and purification techniques – extraction, distillation and crystallization.
	Chromatography: principle and application of column, paper and thin
	layer chromatography.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)

Objectives of the course	This course aims at providing knowledge on theCo-ordination Chemistry and Water Technology
	Carbohydrates and Amino acids
	basics and applications of electrochemistry
	basics and applications of kinetics and catalysis
	Various photochemical phenomenon
Course Outline	UNIT I Co-ordination Chemistry and Water Technology Co-ordination Chemistry: Definition of terms-IUPAC Nomenclature -
	Werner'stheory - EAN rule - Pauling's theory – Postulates -
	Applications to [Ni(CO)4], [Ni(CN)4] ²⁻ ,[Co(CN)6] ³⁻ Chelation -
	Biological role of Haemoglobin and Chlorophyll (elementary idea) –
	Applications in qualitative and quantitative analysis.
	Water Technology: Hardness of water, determination of hardness of
	water using EDTA method, zeolite method-Purification techniques-
	BOD, COD.
	Unit II
	Carbohydrates and Amino acids
	Carbohydrates: Classification, preparation and properties of glucose,
	fructose and sucrose. Discussion of open chain ring structures of
	glucose and fructose. Glucose –fructose interconversion. Properties of
	starch and cellulose.
	Amino acids: Classification - preparation and properties of
	alanine, preparation of dipeptides using Bergmann method. RNA and
	DNA (elementary idea only).
	UNIT III
	Electrochemistry
	Galvanic cells - Standard hydrogen electrode - calomel electrode -
	standard electrode potentials -electrochemical series. Strong and weak
	electrolytes - ionic product of water -pH, pKa, pKb. Conductometric
	titrations - pH determination by colorimetric method – buffer solutions
	and its biological applications - electroplating - Nickel and chrome
	plating – Types of cells -fuel cells-corrosion and its prevention.

	UNIT IV
	Kinetics and Catalysis
	Order and molecularity. Integrated rate expression for I and II (2A \square
	Products) order reactions. Pseudo first order reaction, methods of
	determining order of a reaction – Half-life period – Catalysis -
	homogeneous and heterogeneous, catalyst used in Contact and
	Haber's processes. Concept of energy of activation and Arrhenius
	equation.
	UNIT V
	Photochemistry Grothus-Draper's law and Stark-Einstein's law of photochemical
	equivalence, Quantum yield - Hydrogen-chloride reaction.
	Phosphorescence, fluorescence, chemiluminescence and
	photosensitization and photosynthesis (definition with examples).
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)

	 Chemical Bonding: Molecular Orbital Theory-bonding, antibonding and non-bonding orbitals. M. O diagrams for Hydrogen, Helium, Nitrogen; discussion of bond order and magnetic properties. Nuclear Chemistry: Fundamental particles - Isotopes, Isobars, Isotones and Isomers-Differences between chemical reactions and nuclear reactions- group displacement law. Nuclear binding energy - mass defect - calculations. Nuclear fission and nuclear fusion - differences – Stellar energy. Applications of radioisotopes - carbon dating, rock dating and medicinal applications. 					en, Helium, les. es, Isobars, actions and ing energy - ar fusion -	
	Fuels: Fue	el gases: Natu	ral gas	s, water ga	s, sen	ni water gas,	carbureted
	water gas	, producer ga	s, CNG	, LPG and o	oil ga	s (manufactu	iring details
	not requir	·ed).					
	Silicones:	Synthesis, pro	pertie	s and uses	of sili	icones.	
	Fertilizers	s: Urea, am	noniu	m sulpha	te, p	otassium n	itrate NPK
	fertilizer, s	superphospha	te, trij	ole superpl	hospł	nate.	
	UNIT III Fundamental Concepts in Organic Chemistry Hybridization: Orbital overlap hybridization and geometry of CH4, C2H4, C2H2 and C6H6. Polar effects: Inductive effect and						

	consequences on Ka and K_b of organic acids and bases, electromeric,
	mesomeric, hyper conjugation and steric-examples and explanation.
	Reaction mechanisms: Types of reactions- aromaticity-aromatic
	electrophilic substitution; nitration, halogenation, Friedel-Craft's
	alkylation and acylation.
	Heterocyclic compounds: Preparation, properties of pyrrole and
	pyridine.
	UNIT IV Drugs and Speciality Chemicals
	Definition, structure and uses: Antibiotics viz., Penicillin,
	Chloramphenicol and Streptomycin; Anaesthetics viz., Chloroform
	and ether; Antipyretics viz., aspirin, paracetamol and ibuprofen;
	Artificial Sweeteners viz., saccharin, Aspartame and cyclamate;
	Organic Halogen compounds viz., Freon, Teflon.
Extended	UNIT V: Analytical Chemistry Introduction qualitative and quantitative analysis. Principles of volumetric analysis. Separation and purification techniques: extraction, distillation and crystallization. Chromatography: principle and application of column, paper and thin layer chromatography. Questions related to the above topics, from various competitive

DEPARTMENT OF CHEMISTRY

PROGRAMME SPECIFIC OUTCOMES

On successful completion of the programme the students will be able to

- **PSO1**: acquire in-depth knowledge of the fundamental concepts in all disciplines of chemistry.
- **PSO2**: disseminate the basics of chemistry and advanced topics and analytical skills in organic, inorganic and physical chemistry.
- **PSO3:** uphold ethical values in personal life, research and career.
- **PSO4:** demonstrate laboratory skills, analytical acumen, creatively in academics and research.
- **PSO5:** apply digital tools to collect, analyze and interpret data and presents cientific findings.
- **PSO6:** gain competence to pursue higher education and career opportunities in chemistry and allied fields.
- **PSO7:** exhibit leadership qualities to work individually and within a team in organizing curricular, co-curricular and extracurricular activities.
- **PSO8:** apply the concepts of chemistry to solve problems in the community, entrepreneurial and research pursuits.
- **PSO9:** exhibit competence in educational, industrial and research pursuits that contribute towards the holistic development of self and community.
- **PSO10:** display proactive approach towards sustainable environment through green laboratory practices.
